Zolésio,1988 This volume comprises the proceedings of the Working Conference Boundary variations and boundary control held in Nice France June 10 13 1986 The aim of this Conference was to stimulate exchange of ideas between the group working on shape optimization including free boundary problems and the group working on boundary control of hyperbolic systems including stabilization An important remark is that if one considers a dynamical system governed by linear elasticity the choice of Lagrangian coordinates leads to discuss boundary conditions or boundary control for example to stabilize while the choice of Eulerian coordinates lead to a moving boundary and moving domain This remark challenges us to consider the domain or its boundary as a control
