When a net force acts on an object, the object's motion will change. This means that the object will start moving, stop moving, or change direction. Understanding how forces act on objects is important in many situations, from a person walking to a car driving on a road.</p> <p>Newton's second law states that an object's acceleration is directly proportional to the net force acting on it. This means that if you double the net force acting on an object, its acceleration will also double. This is why a car will accelerate more quickly if you press the gas pedal harder.</p> <p>Mass is a measure of an object's inertia, or its resistance to changes in motion. An object with a larger mass will have a smaller acceleration for the same net force. This is why it is harder to push a heavy box than a light box.</p> <p>Friction is a force that acts between two surfaces in contact. It opposes motion and can cause an object to stop moving. Friction is also what allows a car to move forward on a road. Without friction, the car's wheels would just spin in place.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> <li>What happens when a net force acts on an object at rest?             <ol style="list-style-type: none"> <li>The object changes direction.</li> <li>The object starts moving.</li> <li>The object's velocity changes.</li> <li>The object's velocity remains the same.</li> </ol> </li> <li>Which of the following objects is not moving at all?             <ol style="list-style-type: none"> <li>A soccer ball on a grassy field.</li> <li>A car on a road.</li> <li>A person sitting on a chair.</li> <li>A ball on a string being swung in a circle.</li> </ol> </li> <li>Which force does NOT always affect the acceleration of an object?             <ol style="list-style-type: none"> <li>The force of mass</li> <li>The force of gravity</li> <li>The force of friction</li> <li>The force of air resistance</li> </ol> </li> <li>What happens to the acceleration of an object if the net force acting on it is doubled?             <ol style="list-style-type: none"> <li>It doubles.</li> <li>It stays the same.</li> <li>It is halved.</li> <li>It is quadrupled.</li> </ol> </li> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Normal force</li> </ol> </li> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Normal force</li> </ol> </li> <li>Which of the following is not a type of force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Friction</li> <li>Acceleration</li> <li>Normal force</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
