Canton, 1995 The Animation Studies Reader Nichola Dobson, Annabelle Honess Roe, Amy Ratelle, Caroline Ruddell, 2018-10-18 The Animation Studies Reader brings together both key writings within animation studies and new material in emerging areas of the field The collection provides readers with seminal texts that ground animation studies within the contexts of theory and aesthetics form and genre and issues of representation The first section collates key readings on animation theory on how we might conceptualise animation and on some of the fundamental qualities of animation New material is also introduced in this section specifically addressing questions raised by the nature style and materiality of animation The second section outlines some of the main forms that animation takes which includes discussions of genre Although this section cannot be exhaustive the material chosen is

particularly useful as it provides samples of analysis that can illuminate some of the issues the first section of the book raises. The third section focuses on issues of representation and how the medium of animation might have an impact on how bodies, gender, sexuality, race, and ethnicity are represented. These representations can only be read through an understanding of the questions that the first two sections of the book raise; we can only decode these representations if we take into account form and genre and theoretical conceptualisations such as visual pleasure, spectacle, the uncanny, realism, etc.

**Computer Animation 1999** IEEE Computer Society, 1999. Proceedings of a May 1999 conference. Topics of papers span areas of human motion generation, facial animation, virtual surgery, collaborative virtual worlds, learning from virtual humans, motion coordination and planning for virtual humans, and data capture in virtual worlds. Specific subjects include animation of human walking in virtual environments, skin aging estimation by facial simulation, a behavioral interface to simulate agent-object interactions in real time, and realistic articulated character positioning and balance control in interactive environments.
