Computer Simulation Of Dynamic Phenomena:

Computer Simulation of Dynamic Phenomena Mark L. Wilkins, 2013-03-09 This text describes computer programs for simulating phenomena in hydro dynamics gas dynamics and elastic plastic flow in one two and three dimensions Included in the two dimensional program are Maxwell s equations and thermal and radiation diffusion The programs were developed by the author during the years 1952 1985 at the Lawrence Livermore National Laboratory The largest main frame computers available in the early 1950s were required to solve hydrodynamic problems in one space dimension by using forty mass points Subsequently numerical methods were developed for solving problems in two and three space dimensions but application of these methods had to wait until the main frame computers were large enough to tackle meaningful problems At the present time lap top computers can use these methods to solve problems in three space dimensions with the detail of 10 000 mass points The numerical procedures described in the text permit the exact conservation of physical properties in the solutions of the fundamental laws of mechanics 1 conservation of mass 2 conservation of momentum 3 conservation of energy The laws of mechanics are universal in their application Examples are given for the same computer simulation programs solving problems of penetration mechanics surface waves from earthquakes shock waves in solids and gases failure of materials

Computer Simulation of Dynamic Phenomena Mark L. Wilkins, 2014-01-15 **Computer Simulation of Polymeric Materials** Japan Association for Chemical Innovation, 2016-07-30 This book is the first to introduce a mesoscale polymer simulation system called OCTA With its name derived from Open Computational Tool for Advanced material technology OCTA is a unique software product available without charge that was developed in a project funded by Japanese government OCTA contains a series of simulation programs focused on mesoscale simulation of the soft matter COGNAC SUSHI PASTA NAPLES MUFFIN and KAPSEL When mesoscale polymer simulation is performed one may encounter many difficulties that this book will help to overcome The book not only introduces the theoretical background and functions of each simulation engine it also provides many examples of the practical applications of the OCTA system Those examples include predicting mechanical properties of plastic and rubber morphology formation of polymer blends and composites the micelle structure of surfactants and optical properties of polymer films This volume is strongly recommended as a valuable resource for both academic and industrial researchers who work in polymer simulation

Model-Based Approaches to Learning, 2019-02-11 *Model Based Approaches to Learning* provides a new perspective called learning by system modeling This book explores the learning impact of students when constructing models of complex systems In this approach students are building their own models and engaging at a much deeper conceptual level of understanding of the content processes and problem solving of the domain which is proven to be successful by research from the area of mindtools Topics covered include the foundations of knowledge structures and mental model development modeling for understanding modeling for assessment individual versus collaborative modeling and the use of simulations to support learning and

instruction in complex cognitive domains The thread tying these chapters together is an emphasis on what the learner is doing when he is engaged in modeling and simulation construction rather than merely interacting with constructed simulations Model Based Approaches to Learning is an interesting book for Educators Instructors K 12 Teachers who are looking for forms to use advanced computer technology in classrooms Also Teachers educators who are working on the integration of technology into their teacher preparation classrooms can find new concepts and best practice examples in this book This also holds true for all Educators and Researchers who are interested in modeling as an activity to successfully work with ill structured and complex problems

Computational Techniques for Fluid Dynamics Karkenahalli Srinivas, Clive Fletcher, 2002-06-01 This complementary text provides detailed solutions for the problems that appear in Chapters 2 to 18 of Computational Techniques for Fluid Dynamics CTFD Second Edition Consequently there is no Chapter 1 in this solutions manual The solutions are indicated in enough detail for the serious reader to have little difficulty in completing any intermediate steps Many of the problems require the reader to write a computer program to obtain the solution Tabulated data from computer output are included where appropriate and coding enhancements to the programs provided in CTFD are indicated in the solutions In some instances completely new programs have been written and the listing forms part of the solution All of the program modifications new programs and input output files are available on an IBM compatible floppy direct from C A J Fletcher Many of the problems are substantial enough to be considered mini projects and the discussion is aimed as much at encouraging the reader to explore extensions and what if scenarios leading to further development as at providing neatly packaged solutions Indeed in order to give the reader a better introduction to CFD reality not all the problems do have a happy ending Some suggested extensions fail but the reasons for the failure are illuminating

Technological Literacy and the Curriculum John Beynon, Hugh Mackay, 2025-12-01 First published in 1992 Technological Literacy and the Curriculum addresses the question what should technological literacy consist of The authors view is very different from the narrow skills based technical perspective They see the cultural and social as central to the technological curriculum not marginal The book pushes forward and explores the possibilities of a new expanded cultural definition of technological literacy one that can inform National Curriculum Technology and IT across the school curriculum The aim is to educationalize an educational technology which has hitherto been predominantly concerned with technology rather than with education In this book Michael Apple argues that we must treat technology as a text to be read But first we must learn how to read technology This volume is the second in a trilogy which includes *Understanding Technology in Education* and *Computers in the Classroom*

Solar and Astrophysical Magnetohydrodynamic Flows Kanaris Tsinganos,2012-12-06 Modern observations including recent ones with the Hubble Space Telescope have revealed that the Universe is replete with plasma outflows from all kinds of objects ranging from stars in all their variety to galaxies In this masterly survey of plasma astrophysics written by leading practitioners the first 15 articles in Part I deal with the use of the MHD approach in several key problems of solar plasma such as magnetoconvection and magnetic field generation sunspots and coronal loops magnetic nonequilibrium and coronal heating coronal mass ejections the acceleration of the solar wind and stellar winds across the Main Sequence The following 16 articles of Part II deal with the use of the same MHD approach in several central and puzzling aspects of more distant astrophysical plasmas such as the dynamics of the interstellar medium collimated outflows from young stellar objects and accretion disks molecular outflows and jets associated with enigmatic binaries and symbiotic stars relativistic flows associated with superluminal microquasars in our own galaxy astrophysical jets from nearby galaxies or remote active galactic nuclei and quasars probably fuelled by supermassive black holes The emphasis throughout is on the striking underlying similarities in the physics of all these problems Audience Indispensable for solar physicists and astrophysics alike An ideal textbook for graduate students in physics and astrophysics
