Haug,2012-12-06 These proceedings contain lectures presented at the NATO Advanced Study Institute on Concurrent Engineering Tools and Technologies for Mechanical System Design held in Iowa City Iowa 25 May 5 June 1992 Lectures were presented by leaders from Europe and North America in disciplines contributing to the emerging international focus on Concurrent Engineering of mechanical systems Participants in the Institute were specialists from throughout NATO in disciplines constituting Concurrent Engineering many of whom presented contributed papers during the Institute and all of whom participated actively in discussions on technical aspects of the subject The proceedings are organized into the following five parts Part 1 Basic Concepts and Methods Part 2 Application Sectors Part 3 Manufacturing Part 4 Design Sensitivity Analysis and Optimization Part 5 Virtual Prototyping and Human Factors Each of the parts is comprised of papers that present state of the art concepts and methods in fields contributing to Concurrent Engineering of mechanical systems The lead off papers in each part are based on invited lectures followed by papers based on contributed presentations made by participants in the Institute **Artificial Intelligence in Design '92** John S. Gero,2012-12-06 Design has now become an important research topic in engineering and architecture Design is one of the keystones to economic competitiveness and the fundamental

precursor to manufacturing The development of computational models founded on the artificial intelligence paradigm has provided an impetus for current design research This volume contains contributions from the Second International Conference on Artificial Intelligence in Design held in June 1992 in Pittsburgh They represent the state of the art and the cutting edge of research and development in this field They are of particular interest to researchers developers and users of computer systems in design This volume demonstrates both the breadth and depth of artificial intelligence in design and points the way forward for our understanding of design as a process and for the development of computer based tools to aiddesigners   Management of Design Sriram Dasu,Charles Eastman,2012-12-06 Product design significantly influences product cost and quality as well as market share and profitability of a firm Design projects often involve many people belonging to different functional areas and in many organizations several design projects may be under way at the same time Due to this complexity management of design has given rise to a rich set of research problems in management and engineering In this volume design is considered as the planning and specification activity prior to fabrication Design determines what products will be produced how they will be produced and when they will be introduced into the market The quality of the products and the speed with which they are developed are significantly affected by the design process The design process by which a product is developed is determined by the managerial and engineering practices tools and techniques This book presents engineering and management perspectives on design Topics covered include Decomposition of product development projects Tools and techniques for preliminary evaluation of designs Interface between design and manufacturing assembly and distribution Design information flows and Determination of the scope timing and duration of projects and the allocation of resources   **Advances in Concurrent Engineering** R. fo **Index of Conference Proceedings** ,1992 **Conclog** Jean-Marie Jacquet,1991 This book presents a new concurrent logic programming language called Conclog and a methodology for programming in it Conclog was designed bytaking the ideal features of logic programming as reference rather than by concentrating directly on operational tricks to ensure efficiency This leads to quite easy declarative programming Concern for soundness and completeness ensures that multi directional and multi solution correct procedures can be coded quite straightforwardly Assuming suitable hypotheses on their uses they can be transformed into very efficient versions thanks to the introduction of appropriate control information Correctness preserving properties are given for that purpose The designof Conclog involves three steps First a sound and complete parallel execution model of Horn clause programs is proposed which reduces subgoals of conjunctions independently and uses a calculus for reconciling inconsistent bindings Second this is extended to handle negation as completely as possible Third a minimal and reasonably complete set of extra logical features are defined for optimization and practical purposes The second part of the book presents a methodology for constructing Conclog in a rigorous way This covers the entire programming process from informal specifications via logic descriptions to efficient programs The methodology can be adapted to other languages PUBLISHER S WEBSITE Advances in Design Automation, 1993 Brian J.
