Donald Ervin Knuth

Computer Modern Typefaces:

Computer Modern Typefaces Donald Ervin Knuth, 1986 The Complete Design of a Large Family of Fonts Now 35 years after the first edition the leading worldwide experts on these systems have spent several months inspecting every page thoroughly We now believe that every i has been properly dotted every t has been properly crossed and every bug has been properly exterminated This volume contains precise definitions of about 500 letters numerals and other symbols all described with METAFONT Donald E Knuth s revolutionary language for the design of typefaces Readers will learn how to make their own personal variations of the fonts simply by changing a few parameters Special symbols that are needed for unusual applications can also be created by using the many examples in this book as a model More ambitious readers will be able to extend this work to other character sets such as phonetic or Cyrillic alphabets A close study of the details captured in these METAFONT programs will reveal many previously unpublished tricks that type designers have learned during the past centuries Computer Modern is a family of typefaces that includes 75 standard fonts ranging from the sans serif faces used to typeset the copy on this book jacket to the more formal alphabets and mathematical symbols used to typeset the text of the book itself The 75 standard fonts can easily be extended to an essentially infinite number of further variations because Computer Modern is a meta design rather than a single design In particular this means that different point sizes of type can be drawn to different specifications thereby obtaining better readability Compatible typefaces can be generated for all sorts of printing equipment ranging from low resolution CRT displays to medium resolution laser printers to high resolution phototypesetters Charles Bigelow s introduction explains the history of the modern style of the type design which originated 200 years ago and is being brought up to date by the developments in this book The type designs are accompanied by almost 750 illustrations which are interesting in their own right as examples of mechanically constructed letterforms Specimens of the 75 standard fonts appear near the close of this book followed by several comprehensive indexes Computer Modern Typefaces is the fifth in a five volume series on Computers and Typesetting all authored by Knuth This series presents the results of nearly a decade of innovative research on the problems of preparing publications of high typographic quality

The Computer Modern Family of Typefaces Donald E. Knuth, 1980 TeX in Practice Stephan v. Bechtolsheim, 2013-03-12 You might well wonder why TFPC in Practice is a part of the Monographs in Visualization series However if you really think about typesetting especially fine typesetting you soon realize that in large part it is a visual art as well as a science LEX s algorithms produce in almost all cases aesthetic results of the highest quality On the other hand occasionally one may want to insert some additional space before a subscript or superscript or one may want to adjust the vertical spacing in a fraction Fortunately Donald Knuth the author of LEX allows one to program such corrections easily where needed The four volumes of Stephan von Bechtolsheim s long awaited TFPC in Practice present a comprehensive view of LEX His thorough discussion of each aspect of LEX is liberally laced with cogent illustrative examples Many of these examples represent complete ready to use macros that enhance the capabilities of LEX These examples are of particular interest to both the typesetter and the LEX programmer The typesetter can often solve an immediate problem by either using one of the examples directly or by making minor changes to adapt it to the problem at hand The LEX programmer can use the examples along with Stephan s detailed discussion to increase both the depth and breadth of his or her knowledge of LEX The value of the text is further enhanced by Stephan s concerted effort to explain the reasoning behind each topic or example TeX Unbound Alan Hoenig, 1998 LaTeX is the premier software system used for presenting scientific and technical information on the printed page being the system of choice for writers in mathematics the sciences computer science and engineering It is also increasingly used by nontechnical writers interested in superior printing and document presentation Authors wishing to

take full advantage of this powerful software often have questions that go beyond how to use the basic style files or commands For example how can you integrate any of the high quality commercial fonts that are available How can you typeset mathematics in anything other than the original TeX fonts How can you generate complex graphics for use in a LaTeX document What Internet resources are available to a LaTeX author How can you connect TeX and LaTeX to everyday office software In general writers need clear accurate and concise instructions solutions and explanations for common problems and situations This unique book provides this assistance containing many examples and summaries of procedures to follow TeX Unbound will be the reference of choice for every writer wishing to express technical information *Math into LATEX* George Grätzer, 2013-11-11 It is indeed a lucky author who is given the opportunity to completely rewrite a book barely a year after its publication Writing about software affords such opportunities especially if the original edition sold out since the author is shooting at a moving target u TEX and AMS u TEX improved dramatically with the release of the new standard L^AT_EX called u TEX2 in June of 1994 and the revision of AMS u TEX version 1.2 in February of 1995 The change in AMS u TEX is profound u TEX2 f made it possible for AMS L^AT_EX to join the u TEX world One of the main points of the present book is to make this clear This book introduces u TEX as a tool for mathematical typesetting and treats AMS u TEX as a set of enhancements to the standard u TEX to be used in conjunction with hundreds of other u TEX 2f enhancements I am not a TEX expert Learning the mysteries of the system has given me great respect for those who crafted it Donald Knuth Leslie Lamport Michael Spivak and others did the original work David Carlisle Michael J Downes David M Jones Frank Mittelbach Rainer Schopf and many others built on the work of these pioneers to create the new u TEX and AMS L^AT_EX
