## **Computer Applications And Algorithms:**

*Computer Algorithms: Design, Analysis and Applications* Aaron Armstrong, 2020-09-08 A computer algorithm is a set of instructions for performing calculation data processing or automated reasoning An initial state and input is provided after which the algorithm proceeds through a succession of finite states to produce a final state and output Algorithms may be classified on the basis of their implementation into recursive algorithm logical algorithm deterministic or non deterministic algorithm etc They may also be classified as divide and conquer algorithm search algorithm randomized algorithm etc depending on the design paradigm or methodology The study and analysis of algorithms is an important area of computer science Algorithmic analysis is required to determine how much of a particular resource is required for a given algorithm It is usually practiced without the implementation of a specific programming language Most algorithms are applied on hardware software platforms in which their algorithmic efficiency is evaluated using real code For fast interactive and commercial or scientific usage algorithm efficiency is vital The topics included in this book on computer algorithms are of utmost significance and bound to provide incredible insights to readers Also included herein is a detailed explanation of the various aspects of the design analysis and applications of algorithms This book with its detailed analyses and data will prove

immensely beneficial to professionals and students involved in this area at various levels *Computer Applications and Algorithms* Charles William Gear, 1986 **Modeling Approaches and Algorithms for Advanced Computer Applications**

Abdelmalek Amine, Ait Mohamed Otmane, Ladjel Bellatreche, 2013-05-04 During the last decades Computational Intelligence has emerged and showed its contributions in various broad research communities computer science engineering finance economic decision making etc This was done by proposing approaches and algorithms based either on turnkey techniques belonging to the large panoply of solutions offered by computational intelligence such as data mining genetic algorithms bio inspired methods Bayesian networks machine learning fuzzy logic artificial neural networks etc or inspired by computational intelligence techniques to develop new ad hoc algorithms for the problem under consideration This volume is a comprehensive collection of extended contributions from the 4th International Conference on Computer Science and Its Applications CIIA 2013 organized into four main tracks Track 1 Computational Intelligence Track 2 Security Network Technologies Track 3 Information Technology and Track 4 Computer Systems and Applications This book presents recent advances in the use and exploitation of computational intelligence in several real world hard problems covering these tracks such as image processing Arab text processing sensor and mobile networks physical design of advanced databases model matching etc that require advanced approaches and algorithms borrowed from computational intelligence for solving them
