the development of our contemporary culture of computing In Image Objects Jacob Gaboury offers a prehistory of computer graphics through an examination of five technical objects an algorithm an interface an object standard a programming paradigm and a hardware platform arguing that computer graphics transformed the computer from a calculating machine into an interactive medium Gaboury explores early efforts to produce an algorithmic solution for the calculation of object visibility considers the history of the computer screen and the random access memory that first made interactive images possible examines the standardization of graphical objects through the Utah teapot the most famous graphical model in the history of the field reviews the graphical origins of the object oriented programming paradigm and finally considers the development of the graphics processing unit as the catalyst that enabled an explosion in graphical computing at the end of the twentieth century The development of computer graphics Gaboury argues signals a change not only in the way we make images but also in the way we mediate our world through the computer and how we have come to reimagine that world as computational
