Computer Solution of Large Sparse Positive Definite Systems Alan George,Joseph W. H. Liu,1981 **Numerical Linear Algebra on High-Performance Computers** Jack J. Dongarra,Iain S. Duff,Danny C. Sorensen,Henk A. van der Vorst,1998-01-01 Provides a rapid introduction to the world of vector and parallel processing for these linear algebra applications **Proceedings of the Army Numerical and Computers Analysis Conference** ,1981 *Graph Database and Graph Computing for Power System Analysis* Renchang Dai,Guangyi Liu,2023-09-28 Graph Database and Graph Computing for Power System Analysis Understand a new way to model power systems with this comprehensive and practical guide Graph databases have become one of the essential tools for managing large data systems Their structure improves over traditional table based relational databases in that it reconciles more closely to the inherent physics of a power system enabling it to model the components and the network of a power system in an organic way The authors pioneering research has demonstrated the effectiveness and the potential of graph data management and graph computing to transform power system analysis Graph Database and Graph Computing for Power System Analysis presents a comprehensive and accessible introduction to this research and its emerging applications Programs and applications conventionally modeled for traditional relational databases are reconceived here to incorporate graph computing The result is a detailed guide which demonstrates the utility and flexibility of this cutting edge technology The book s readers will also find Design configurations for a graph based program to solve linear equations differential equations optimization problems and more Detailed demonstrations of graph based topology analysis state estimation power flow analysis security constrained economic dispatch automatic generation control small signal stability transient stability and other concepts analysis and applications An authorial team with decades of experience in software design and power systems analysis Graph Database and Graph Computing for Power System Analysis is essential for researchers and academics in power systems analysis and energy related fields as well as for advanced graduate students looking to understand this particular set of technologies **Proceedings of the 1981 Army Numerical Analysis and Computers Conference** ,1981 *Multigrid Methods* W. Hackbusch,U. Trottenberg,2006-11-15 *Transputing in Numerical and Neural Network Applications* Gerard Louis Reijns,Jian Luo,1992 An examination of the use of transputers in numerical computing and neural networks Topics covered include linear systems of equations and programming fluid and molecular dynamics simulation transformations Kalman filtering and general numerical problems Neural networks are discussed in ters of algorithms and simulation *Proceedings of the Fifth SIAM Conference on Parallel Processing for Scientific Computing* J. J. Dongarra,1992-01-01 This text gives the proceedings for the fifth conference on parallel processing for scientific computing Introduction to Numerical Analysis J. Stoer,R. Bulirsch,2013-03-09 On the occasion of this new edition the text was enlarged by several new sections Two sections on B splines and their computation were added to the chapter on spline functions Due to their special properties their flexibility and the availability of well

tested programs for their computation B splines play an important role in many applications Also the authors followed suggestions by many readers to supplement the chapter on elimination methods with a section dealing with the solution of large sparse systems of linear equations Even though such systems are usually solved by iterative methods the realm of elimination methods has been widely extended due to powerful techniques for handling sparse matrices We will explain some of these techniques in connection with the Cholesky algorithm for solving positive definite linear systems The chapter on eigenvalue problems was enlarged by a section on the Lanczos algorithm the sections on the LR and QR algorithm were rewritten and now contain a description of implicit shift techniques In order to some extent take into account the progress in the area of ordinary differential equations a new section on implicit differential equa tions and differential algebraic systems was added and the section on stiff differential equations was updated by describing further methods to solve such equations
