Elsevier's Dictionary of Cybernims T.R. Pyper,C.A.C. Stout,2000-05-03 This dictionary was produced in response to the rapidly increasing amount of quasi industrial jargon in the field of information technology compounded by the fact that these somewhat esoteric terms are often further reduced to acronyms and abbreviations that are seldom explained Even when they are defined individual interpretations continue to diverge Until now the codes have been reproduced in separate language publications there is no universal listing in alphabetical order that covers the English French Spanish and German languages This dictionary sets out the English French Spanish and German alternatives as a single merge sorted whole Today most of the codes have passed

into the public domain simply because they exist in most of the telecommunications systems installed throughout the developed and developing world and are largely known to most of those who work in that particular area. However, foreign variants often defy even the most astute observer. This dictionary seeks to clarify this bewildering situation as much as possible. The 26 000 definitions set out here drawn from some 16 000 individual cybernoms cover computing, electronics, telecommunications including intelligent networks and mobile telephony together with satellite technology and Internet Web terminology. Annex I lists some of the innumerable file types found in the filing systems of computers using powerful desktop managers and Annex II lists the abbreviations of country names found in universal resource locators URL.

Elsevier's *Dictionary of Cybernoms* is a useful tool for translators, students, universities and computer enthusiasts. *The Computer and Information Science and Technology Abbreviations and Acronyms Dictionary* David W. South, 1994-05-06. Written for the professional and the layman, the book provides the meanings of important and interesting acronyms in the broad area of computing and information science and technology. The acronyms and abbreviations contained in this book were created by the men and women of the computer and information age to save time and space and eliminate unnecessary repetition and wordage. The book is of value to engineers, scientists, technologists, executives and managers in technical fields, programmers, systems analysts, writers and computer owners or potential buyers.

Dictionary of Acronyms and Technical Abbreviations Jakob Vlietstra, 2012-12-06. My first encounter with acronyms took place when I was ten years old and growing up in an occupied country during the Second World War. My father proudly announced one day that despite the ban imposed by the occupying administration he had managed to get a radio installed and could receive the BBC. All acronyms used in this introduction are listed in this dictionary. To me the meaning of BBC was that we would receive different information about the war than we got from the usual censored broadcasts. There was of course the well known acronym associated with the NT but at that time I did not realize that it meant more than the postal service in those years, a deteriorated service. Gradually the daily use of acronyms grew. Most of the newly acquired three and four letter abbreviations referred to organizations such as the broadcasting corporations in The Netherlands and Belgium and references to countries such as the USA, USSR and UK. When attending high school the HBS after the war, my knowledge of acronyms grew slowly. Even during the ten years I spent in the Dutch Merchant Marine the GHV, the number of acronyms was limited to advanced equipment that eventually became known as RADAR, LORAN and DECCA.
