Computing In Structural Engineering:

High Performance Computing in Structural Engineering Hojjat Adeli, Roesdiman Soegiarso, 1998-11-30 High performance multiprocessor computers provide new and interesting opportunities to solve large scale structural engineering problems However the development of new computational models and algorithms that exploit the unique architecture of these machines remains a challenge High Performance Computing in Structural Engineering explores the use of supercomputers with vectorization and parallel processing capabilities in structural engineering applications The book focuses on the optimization of large structures subjected to the complicated implicit and discontinuous constraints of commonly used design codes and presents robust parallel algorithms for analysis of these structures The authors apply the algorithms to and analyze the performance of minimum weight designs of large steel space trusses and moment resisting frames with or without bracings consisting of discrete standard shapes They clearly show that adroit and judicious use of vectorization techniques can improved the speedup of an optimization algorithm and that parallel processing can lead to even further speedup With its review of the necessary background material generous illustrations and unique content this is the definitive resource for the analysis and optimization of structure on shared memory multiprocessor computers By extension High Performance Computing in Structural Engineering will prove equally valuable in distributed computing on a cluster of workstations
