Cognitive Processes In Eye Guidance:

Cognitive Processes in Eye Guidance Geoffrey Underwood, 2005-07-28 Whether reading looking at a picture or driving how is it that we know where to look next how does the human visual system calculate where our gaze should be directed in order to achieve our cognitive aims This book brings together leading vision scientists studying eye movements across a range of activities such as reading driving computer activities and chess It provides groundbreaking new research that will help us understand how it is that we know where to move our eyes and thereby better understand the cognitive processes underlying these activities

Eye Guidance in Reading and Scene Perception G. Underwood, 1998-07-16 The distinguished contributors to this volume have been set the problem of describing how we know where to move our eyes There is a great deal of current interest in the use of eye movement recordings to investigate various mental processes The common theme is that variations in eye movements indicate variations in the processing of what is being perceived whether in reading driving or scene perception However a number of problems of interpretation are now emerging and this edited volume sets out to address these problems The book investigates controversies concerning the variations in eye movements associated with reading ability concerning the extent to which text is used by the guidance mechanism while reading concerning the relationship between eye movements and the control of other body movements the relationship between what is inspected and what is perceived and concerning the role of visual control attention in the acquisition of complex perceptual motor skills in addition to the nature of the guidance mechanism itself The origins of the volume are in discussions held at a meeting of the European Society for Cognitive Psychology ESCOP that was held in Wurzburg in September 1996 The discussions concerned the landing effect in reading an effect that if substantiated would provide evidence of the use of parafoveal information in eye guidance and these discussions were explored in more detail at a small meeting in Chamonix in February 1997 Many of the contributors to this volume were present at the meeting but the arguments were not resolved in Chamonix either Other leaders in the field were invited to contribute to the discussion and this volume is the product The argument remains unresolved but the problem is certainly clearer

Cognitive Processes in Eye Guidance Geoffrey D. M. Underwood, 2005 Whether reading looking at a picture or driving how is it that we know where to look next how does the human visual system calculate where our gaze should be directed in order to achieve our cognitive aims This book brings together leading vision scientists studying eye movements across a range of activities such as reading driving computer activities and chess It provides groundbreaking new research that will help us understand how it is that we know where to move our eyes and thereby better understand the cognitive processes underlying these activities

[Eye Movements and Information Processing During Reading](#) Ralph Radach, Alan Kennedy, Keith Rayner, 2004 Measurement and analysis of eye movements are two of the most powerful ways to study the workings of the human mind This Special Issue on eye movements and information processing in reading presents an overview of experimental research based on this methodology Eye

movements provide a unique opportunity to examine principles of human information processing in a well structured visual environment while people engage in a natural cognitive task At the same time oculomotor measures can be used as a tool to develop and test psycholinguistic hypotheses about the processing of written language The papers in this issue contribute to both aspects addressing issues that dominate current debates in the field Seen from the angle of visual information processing a major theme is the role played by parafoveal information for different types and levels of processing and for oculomotor control in reading This includes effects of visual and linguistic word properties on the selection of words for fixation and the specification of saccade amplitudes Clearly the most controversial question in this context concerns the allocation of attention with positions ranging from a sequentially moving spotlight to a gradient of spatially distributed processing Related to this is the issue of serial vs parallel word processing and the fundamental question as to what extent the duration of fixations in reading is related to lexical processing Taking a psycholinguistic perspective the topics addressed include several levels of language processing from orthography to pragmatic information in sentence reading New approaches to the study of morphologically complex words are reported together with novel work revealing the complex nature of the apparently accessible but elusive concept of word frequency Other papers reflect current theoretical discussions centered on the development of computational models of the reading process and contribute to the empirical base of these discussions Taken together this collection of papers supplemented by an introduction to the field and a commentary on major issues presents a comprehensive and up to date perspective on a research area currently characterised by numerous theoretical and empirical disputes The papers will be of particular appeal to readers interested in basic and applied psycholinguistics attention and visual perception motor control and the modelling of complex cognitive processes

The Oxford Handbook of Psycholinguistics M. Gareth Gaskell, Gerry Altmann, 2007 The Oxford Handbook of Psycholinguistics brings together the views of 75 leading researchers in psycholinguistics to provide a comprehensive and authoritative review of the current state of the art in psycholinguistics With almost 50 chapters written by experts in the field the range and depth of coverage is unequalled

Handbook of Psycholinguistics Matthew Traxler, Morton Ann Gernsbacher, 2011-04-28 With Psycholinguistics in its fifth decade of existence the second edition of the Handbook of Psycholinguistics represents a comprehensive survey of psycholinguistic theory research and methodology with special emphasis on the very best empirical research conducted in the past decade Thirty leading experts have been brought together to present the reader with both broad and detailed current issues in Language Production Comprehension and Development The handbook is an indispensable single source guide for professional researchers graduate students advanced undergraduates university and college teachers and other professionals in the fields of psycholinguistics language comprehension reading neuropsychology of language linguistics language development and computational modeling of language It will also be a general reference for those in neighboring fields such as cognitive and developmental psychology

and education Provides a complete account of psycholinguistic theory research and methodology 30 of the field's foremost experts have contributed to this edition An invaluable single source reference *Handbook of Psychology, Experimental Psychology* Alice F. Healy, Robert W. Proctor, 2003-03-11 Includes established theories and cutting edge developments Presents the work of an international group of experts Presents the nature origin implications and future course of major unresolved issues in the area Eye Movements and Their Role in Visual and Cognitive Processes Eileen Kowler, 1990 This is the first book to deal exclusively with oculomotor performance in a series that up to this point has been devoted largely to reviews of research on oculomotor anatomy and physiology The publication of this volume signifies the recognition of the fact that a genuine understanding of eye movement will not come about through the study of neurons alone We need to know about the capacity to make different kinds of eye movement and about how such oculomotor capacity is used to accomplish different sorts of visual and cognitive tasks i e how the eye can move and why it moves in particular ways Research on respective topics was critically evaluated by the contributing authors resulting in a controversial and up to date appraisal of this subject **Reading as a Perceptual Process** A. Kennedy, D. Heller, J. Pynte, Ralph Radach, 2000-08-04 This book is divided into five sections dealing with various fundamental issues in current research attention information processing and eye movement control the role of phonology in reading syntax and discourse processing and computational models and simulations Control and measurement of eye movements form a prominent theme in the book A full understanding of the where and when of eye movement control is a prerequisite of any complete theory of reading since it is precisely at this point that perceptual and cognitive processes interact Amongst the hot topics included are the relation between parafoveal and foveal visual processing of linguistic information the role of phonology in fluent reading and the emergence of statistical tuning approaches to sentence parsing Also discussed in the book are three attempts to develop quantitative models of reading which represent a significant departure in theory building and a quantum step in the maturation of reading research Much of the work reported in the book was first presented at the 5th European Workshop on Language Comprehension organised in April 1998 which was held at the CNRS Luminy Campus near Marseilles All contributions summarise the state of the art in the relevant areas of reading research *Lexical Representation and Process* William Marslen-Wilson, Max Planck Institut für Psycholinguistik (Nijmegen, Netherlands), Interfacultaire werkgroep taal- en spraakgedrag (Nimègue, Pays-Bas), 1989 The 18 contributions in *Lexical Representation and Process* provide a coherent and well documented frame of reference for a field of study that is becoming central to both linguistics and psycholinguistics Neuropsychological and Cognitive Processes in Reading Francis J. Pirozzolo, Merlin C. Wittrock, 1981 Cognition In Action Alan F. Collins, Philip Levy, Peter E. Morris, Mary M. Smyth, 1994-08-05 This revised textbook is designed for undergraduate courses in cognitive psychology It approaches cognitive psychology by asking what it says about how people carry out everyday activities how people organize and use their knowledge in order to behave appropriately in the world in which they live Each chapter of the

book starts with an example and then uses this to introduce some aspect of the overall cognitive system Through such examples of cognition in action important components of the cognitive system are identified and their interrelationships highlighted Thus the text demonstrates that each part of the cognitive system can only be understood properly in its place in the functioning of the whole This edition features increased coverage of neuropsychological and connectionist approaches to cognition

The On-line Study of Sentence Comprehension Manuel Carreiras, Charles Clifton, Jr., 2004-09-13 Addresses issues relating to the use of advanced research techniques specifically Eyetracking and ERP to study the moment by moment mental processes that occur while a reader or listener is understanding language

Cognition in Individual and Social Contexts Adrienne Bennett, Kevin M. McConkey, 1989 This volume consists of 58 papers concerned with cognition in individual and social contexts It is organized into eight parts each containing papers that reflect current concerns of that area The diversity of areas illustrates the degree to which cognitive psychology has spread beyond its original boundaries and the important links that cognitive psychologists are forging with other areas Overall several chapters discuss the nature of consciousness and others consider the link between theory and methodology other chapters argue the relevance of computational models to cognitive processing and others highlight the relevance of individual differences in aspects of cognition
