John Oprea

Cohomological Methods In Transformation Groups:

Cohomological Methods in Transformation Groups C. Allday, V. Puppe, 1993-07 This is an account of the theory of certain types of compact transformation groups namely those that are susceptible to study using ordinary cohomology theory and rational homotopy theory which in practice means the torus groups and elementary abelian p groups The efforts of many mathematicians have combined to bring a depth of understanding to this area However to make it reasonably accessible to a wide audience the authors have streamlined the presentation referring the reader to the literature for purely technical results and working in a simplified setting where possible In this way the reader with a relatively modest background in algebraic topology and homology theory can penetrate rather deeply into the subject whilst the book at the same time makes a useful reference for the more specialised reader

Seminar on Transformation Groups Armand Borel, 2016-03-02 Armond Borel's influential seminar on transformation groups from the acclaimed Annals of Mathematics Studies series Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940 One of the oldest and most respected series in science publishing it has included many of the most important and influential mathematical works of the twentieth century The series continues this tradition as Princeton University Press publishes the major works of the twenty first century To mark the continued success of the series all books are available in paperback and as ebooks

Proceedings of the Conference on Transformation Groups P. S. Mostert, 2012-12-06 These Proceedings contain articles based on the lectures and in formal discussions at the Conference on Transformation Groups held at Tulane University May 8 to June 2 1967 under the sponsorship of the Advanced Science Seminar Projects of the National Science Foundation Contract No GZ 400 They differ however from many such Conference proceedings in that particular emphasis has been given to the review and exposition of the state of the theory in its various manifestations and the suggestion of direction to further research rather than purely on the publication of research papers That is not to say that there is no new material contained herein On the contrary there is an abundance of new material many new ideas new questions and new conjectures are fully incorporated within the framework of the theory as the various authors see it An original objective of the Conference and of this report was to supply a much needed review of and supplement to the theory since the publication of the three standard works MONTGOMERY and ZIPPIN *Topological Transformation Groups* Interscience Publishers 1955 BOREL et al *Seminar on Transformation Groups* Annals of Math Surveys 1960 and CONNER and FLOYD *Differential Periodic Maps* Springer Verlag 1964 Considering this objective ambitious enough it was decided to limit the survey to that part of Transformation Group Theory derived from the Montgomery School

Handbook of Geometric Topology R.B. Sher, R.J. Daverman, 2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spacial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both

as an introduction to the subject and as a wide ranging resource for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the reader with an up to date overview of this flourishing branch of mathematics

Algebraic Topology. Poznan 1989 Stefan Jackowski, Bob Oliver, Krzysztof Pawalowski, 2006-11-14 As part of the scientific activity in connection with the 70th birthday of the Adam Mickiewicz University in Poznan an international conference on algebraic topology was held In the resulting proceedings volume the emphasis is on substantial survey papers some presented at the conference some written subsequently

Geometry of Dihedral Transformation Groups Eldar Jens Straume, 1978

Toric Topology Megumi Harada, 2008

Toric topology is the study of algebraic differential symplectic geometric combinatorial and homotopy theoretic aspects of a particular class of torus actions whose quotients are highly structured The combinatorial properties of this quotient and the equivariant topology of the original manifold interact in a rich variety of ways thus illuminating subtle aspects of both the combinatorics and the equivariant topology Many of the motivations and guiding principles of the field are provided by though not limited to the theory of toric varieties in algebraic geometry as well as that of symplectic toric manifolds in symplectic geometry This volume is the proceedings of the International Conference on Toric Topology held in Osaka in May June 2006 It contains about 25 research and survey articles written by conference speakers covering many different aspects of and approaches to torus actions such as those mentioned above Some of the manuscripts are survey articles intended to give a broad overview of an aspect of the subject all manuscripts consciously aim to be accessible to a broad reading audience of students and researchers interested in the interaction of the subjects involved We hope that this volume serves as an enticing invitation to this emerging field
