Collaborative learning takes place with the expectation that people will achieve more together than alone Crucial to this is the appropriate composition of groups and the participation of each group member through communication written verbal or non verbal by sharing ideas experiences and knowledge in a diverse and elaborate way However collaboration is extended and substantially changed by the Internet and other technologies The always on connection to the Internet enables people to be in contact with peers anytime and anywhere and can help to overcome social isolation which is particularly common in digital learning contexts not least because it can positively influence learner satisfaction The ability to record speech and writing in a digital context encourages reflection on one's own contributions before they are made available to the group Moreover digital applications and methods can support the externalization of one's own thinking and learning processes to the group members AI helps to investigate how collaborative learning works e.g. through data driven methods of learning analytics
