Coherence And Quantum Optics VIII:

Coherence and Quantum Optics VIII N.P. Bigelow, J.H. Eberly, C.R. Stroud Jr., I.A. Walmsley, 2012-12-06 The Eighth Rochester Conference on Coherence and Quantum Optics was held on the campus of the University of Rochester during the period June 13-16, 2001. This volume contains the proceedings of the meeting. The meeting was preceded by an affiliated conference, the International Conference on Quantum Information, with some overlapping sessions on June 13. The proceedings of the affiliated conference will be published separately by the Optical Society of America. A few papers that were presented in common plenary sessions of the two conferences will be published in both proceedings volumes. More than 268 scientists from 28 countries participated in the week-long discussions and presentations. This Conference differed from the previous seven in the CQO series in several ways, the most important of which was the absence of Leonard Mandel. Professor Mandel died a few months before the conference. A special memorial symposium in his honor was held at the end of the conference. The presentations from that symposium are included in this proceedings volume. An innovation that we believe made an important contribution to the conference was the inclusion of a series of invited lectures chaired by CQO founder Emil Wolf, reviewing the history of the fields of coherence and quantum optics before about 1970. These were given by three prominent participants in the development of the field: C. Cohen-Tannoudji, F. Clauser, and R. Glauber.

Mandel, Emil Wolf, 1978 **Conference on Coherence and Quantum Optics**, 2019 **Optical Coherence and Quantum Optics** Leonard Mandel, Emil Wolf, 1995-09-29 This book presents a systematic account of optical coherence theory within the framework of classical optics as applied to such topics as radiation from sources of different states of coherence, foundations of radiometry, effects of source coherence on the spectra of radiated fields, coherence theory of laser modes, and scattering of partially coherent light by random media. **Coherence and Quantum Optics VI** J.H. Eberly, L. Mandel, E. Wolf, 2012-12-06 The conference held at the U of Rochester in June 1989 was a sequel to five earlier meetings in this series held in 1960, 1966, 1972, 1977, and 1983. This volume contains abbreviated versions of most of the 252 papers presented, addressing such topics as laser spectroscopy, photon statistics, pha

Barnett, John A. Vaccaro, 2007-04-27 Describing the phase of an electromagnetic field mode or harmonic oscillator has been an obstacle since the early days of modern quantum theory. The quantum phase operator was even more problematic with the invention of the maser and laser in the 1950s and 1960s. This problem was not solved until the Pegg-Barnett formalism was developed in the 1980s. Works Of Emil Wolf (With Commentary) Emil Wolf, 2001-06-04 This invaluable book presents most of the important papers of Emil Wolf published over half a century. It covers chiefly diffraction theory especially the analysis of the focal region the theory of direct and inverse scattering phase space methods in quantum mechanics the foundation of radiometry phase conjugation and coherence theory. Several papers which have become classics of the optical literature are included such as those on Wolf's rigorous formulation of the theory of partial coherence and partial polarization the introduction of diffraction tomography and his discovery of correlation induced shifts of spectral lines often called the Wolf effect. There are also papers dealing with the historical development of optics and some review articles. Bigelow, 2008 **Laser Spectroscopy VIII** Willy Persson, Sune Svanberg, 1987-11-25 The Eighth International Conference on Laser Spectroscopy EICOLS 87 was held at the Sunwing Hotel in Åre, Sweden, June 22-26, 1987. Following the traditions of its predecessors at Vail, Megeve, Jackson Lake, Rottach, Egern, Jasper Park, Interlaken, and Maui, the intent of EICOLS 87 was to provide a forum for active scientists to meet in an informal atmosphere to discuss recent developments in laser spectroscopy. The scenic and remote location of the conference venue greatly stimulated a lively and relaxed exchange of information and ideas. The conference was attended by 227 scientists from 20 countries including Australia, Austria, Canada, the People's Republic of China, Denmark, Finland, France, the Federal Republic of Germany, Israel, Italy, Japan, The Netherlands, New Zealand, Norway, Poland, the Soviet Union, Sweden, Switzerland, the United Kingdom, and the United States. The scientific program included 14 topical sessions with 50 invited talks ranging in length from 20 to 40 minutes. About 70 additional invited contributions were presented in two evening poster sessions. A third evening session included 4 oral and 18 poster presentations. Laser Manipulation of Atoms and Ions E. Arimondo, William Daniel Phillips, F. Strumia, Società italiana di fisica, 1992 The recent fascinating progress on laser cooling is the result of the close connection between theoretical work and the rapid technological advances in laser sources particularly in the field of powerful semiconductor and solid state lasers operating over a wide range of optical and near infrared frequencies. The very close international and personal collaboration amongst the researchers resulting in a direct link between experimental data and theoretical calculations which characterize work in this field have been important factors in the rapid comprehension of the subtle and beautiful phenomena involved in laser manipulation. This Enrico Fermi school is the first formal school fully devoted to this topic. The theoretical part of the book includes contributions on the framework for the study of the photon momentum exchanges in the absence of relaxation, recent mechanisms of laser cooling, an analysis of the cooling forces, analysis of atomic and molecular beams, cooling through coherent population trapping, and the relation between laser cooling and quantum nondemolition measurements. The experimental section deals with topics such as an analysis of atomic and molecular beams, methods and applications of laser cooling, advances in laser cooling, and the new exciting field of atomic interferometry.
