

## CABLE MODEM/ROUTER WITH WIRELESS-N QUICK START

This Quick Start description is specific to Cable Modem/Router with Wireless-N. A cable modem connects to an Internet service provider (ISP) and provides access to the Internet. It also provides access to other services, such as streaming video services, email, instant messaging, downloading information about applications, and so on. (See [Networks and OS](#).)

### Package Contents

- Cable Modem/Router
- Power cord
- Ethernet LAN cable
- CD with user manual

### Before installing your Cable Modem

The cable modem/router needs to know your modem's MAC ADDRESS, which is a unique address on the network. It is provided by your cable modem. You can obtain this information from the hardware manufacturer or by contacting the cable company (DSL/DSL Modem/Router). You may also be able to provide the modem's model name and number, which is **CM1000**, if you have the modem's serial number, you can find it on the MAC address on the modem's label.

### System Requirements

- The modem/router requires a cable modem that supports speeds up to 100 Mbps (DOCSIS standard) - DOCSIS 1.1, if you want to get cable modem speeds above 100 Mbps, you need cable modem.
- To use the Quick Start, you need a computer, an Ethernet cable.

If your cable service provider provided a cable modem starter kit, please confirm with them that you are allowed to use the cable modem starter kit from your service provider, or it may be required for a computer if you don't have or plan to use a cable modem starter kit.

### If your cable service provider provided a cable modem starter kit

Some cable service providers supply a cable modem starter kit that includes everything you need to get started. The kit may include a modem, cables, and a power supply. If you have a cable modem starter kit, you may not need to purchase a cable modem. Please refer to the user manual of the cable modem that is included in the kit for more information. If you have a cable modem, you may not need to purchase a cable modem. Please refer to the user manual of the cable modem that is included in the kit for more information. The modem is DOCSIS 1.1 compliant. Cable, DSL, and services are a normal cable modem.

We recommend to plug in the modem's power cord, connect the modem to your computer, power cables, and then connect to a computer using either the Ethernet LAN cable or the wireless feature (connecting the Cable Modem/Router to Your Wireless Computer).

**Note:** Please refer to the Hardware Connection section. You may need to hold a button of the back of the cable modem while connecting it to the connection.

After you have installed your cable modem and the connection is established, you can connect your cable modem to your computer to be started.

**Note:** When I do this, I consider it power up the first time because the cable modem/router must be powered on to connect to the Internet. You'll see the LAN light, power LED, and power LED light. After the power LED light starts to flash, you can connect to the Internet.

Now open your browser and go to the website that you want to visit. The cable modem is working.

- If you want to connect the modem/router wirelessly to your device, see [Connecting the Cable Modem/Router Wirelessly to Your Device](#).

- If you want to connect additional computers/devices using the modem/router's Ethernet LAN ports, please see [Reset the Only if You Are Connecting Additional Computers and/or Other Devices to the Cable Modem/Router's Ethernet Ports](#).
- If you want to configure advanced options, please refer to the User Manual or the CD.

### How to connect to a computer if you don't have or choose not to use a cable modem starter kit

1. Be sure your computer is on and the cable modem is unplugged. **Note:** Please refer to the Hardware Connection section. You may need to hold a button of the back of the cable modem while connecting it to the connection. If you are connecting to the Internet, you may need to hold the Internet light.
2. Disconnect one of the Ethernet cables in the cable modem's Ethernet LAN ports. Plug the other end of the Ethernet cable in the Cable Modem/Router's Ethernet LAN port. The cable modem/router must be powered on to connect to the Internet.
  - The cable modem/router has a power button on the back. You can use a power button to power on the modem/router. When you power on the modem/router, you can see a power LED light on the back.
  - Alternatively, you may connect to a power source (a power supply) and power on the modem/router by connecting to the cable modem.
3. Plug the power cord into the AC IN connector on the back of the cable modem/router. The power LED light starts to flash. The power LED light starts to flash when the power LED light is on.
4. The connection is established that you connect the modem/router to your computer. You'll see the LAN light, power LED, and power LED light. After the power LED light starts to flash, you can connect to the Internet.

**Note:** When I do this, I consider it power up the first time because the cable modem/router must be powered on to connect to the Internet. You'll see the LAN light, power LED, and power LED light. After the power LED light starts to flash, you can connect to the Internet.

Now open your browser and go to the website that you want to visit. The cable modem is working.

- If you want to connect the modem/router wirelessly to your device, see [Connecting the Cable Modem/Router Wirelessly to Your Device](#).
- If you want to connect additional computers/devices using the modem/router's Ethernet LAN ports, please see [Reset the Only if You Are Connecting Additional Computers and/or Other Devices to the Cable Modem/Router's Ethernet Ports](#).
- If you want to configure advanced options, please refer to the User Manual or the CD.

### Power-on/Power Off

- To connect the modem/router wirelessly to your device.
- To connect additional computers/devices using the modem/router's Ethernet LAN ports.
- To use the power button on the back of the cable modem/router to power on the modem/router. The power LED light starts to flash when the power LED light is on.

### Hardware Connection

ETHERNET LAN PORTS POWER LED LIGHT

Port	Description
LAN 1-4	Four Ethernet LAN ports (supporting 10/100/1000 Mbps) for connecting to your LAN devices.
ETHERNET LAN	Network interface to computer. You can connect a LAN cable.
USB	The USB interface (USB 2.0) port.
POWER	The AC power inlet. You can connect a power cord to the power inlet. You can also connect the power cord to the power inlet.
POWER	Power on/off button. You can connect a power cord to the power inlet.
LAN	Network interface to computer. You can connect a LAN cable.

### Connecting the Cable Modem/Router Wirelessly to Your Device

The cable modem/router has wireless-N for IEEE 802.11n compatible connection to your computer and/or other devices. The cable modem/router comes factory-configured with WPA/WPA2 security, which can be changed to WPA.

To make connections with devices that support WPA, you need WPA2 to set up your wireless network. Please refer to the User Manual for more information. For more information, please refer to the User Manual for more information. For more information, please refer to the User Manual for more information.

**Note:** Please refer to the User Manual for more information. For more information, please refer to the User Manual for more information.

### Secure Wireless Security Settings

The default WPA2 is WPA2-PSK. The default WPA2-PSK is WPA2-PSK. You can change the WPA2-PSK to WPA2-PSK. You can change the WPA2-PSK to WPA2-PSK. You can change the WPA2-PSK to WPA2-PSK.

**Note:** If you want to change the default WPA2 and WPA2-PSK, please refer to the User Manual for more information.

If security and wireless-N are not supported, you can connect to the Internet using WPA2-PSK security. Please refer to the User Manual for more information.

### Using WPA2 to set up your wireless network

1. Press the WPA2 button on the front panel of the modem/router. The WPA2 LED light starts to flash.
2. Select a device that supports WPA2. You can connect to the Internet using WPA2 security. You can connect to the Internet using WPA2 security. You can connect to the Internet using WPA2 security.
3. Connect to the Internet using WPA2 security. You can connect to the Internet using WPA2 security. You can connect to the Internet using WPA2 security.
4. If you have a device that supports WPA2 security, you can connect to the Internet using WPA2 security. You can connect to the Internet using WPA2 security.
5. You can connect to the Internet using WPA2 security. You can connect to the Internet using WPA2 security.

**Note:** If you want to change the default WPA2 and WPA2-PSK, please refer to the User Manual for more information.

### Reset This Only if You Are Connecting Additional Computers and/or Other Devices to the Cable Modem/Router's Ethernet LAN Ports

The factory default settings are used to connect to the Internet. You can change the default settings. You can change the default settings. You can change the default settings.
