Business Process Engineering:

Business Process Engineering D. Jack Elzinga, Thomas R. Gullede, Chung-Yee Lee, 1999-01-31 Due to growing concern about the competitiveness of industry in the international marketplace and the efficiency of government enterprises widespread initiatives are currently underway to enhance the competitive posture of firms and to streamline government operations. Nearly all enterprises are engaged in assessing ways in which their productivity, product quality and operations can be improved. These efforts can be described as Business Process Engineering (BPE). BPE had its roots in industry under differing titles: Process Improvement, Process Simplification, Process Innovation, Reengineering, etc. It has matured to be an important ingredient of successful enterprises in the private and public sectors. After extensive exploitation by industrial and governmental practitioners and consultants, it is attracting increasing attention from academics in the fields of engineering and business. However, even with all of this attention in the popular literature, serious scholarly literature on BPE is in short supply. This is somewhat surprising, especially since so many large international organizations have attempted BPE projects with varied success.

Business Process Engineering August-Wilhelm Scheer, 1994 Once the decision has been made to introduce lean management, the task of actually reengineering the organization's business processes will involve months or even years of work and study. This book affords researchers, users and students valuable assistance in implementing new organizational concepts through the employment of new information processing techniques. The structure of the book follows the business processes of logistics, product development, information and coordination, and offers detailed examples of how outdated organizational structures can be reengineered. The portrayals are embedded in the proven Architecture of Integrated Information Systems (ARIS) and emphasize an holistic view of the problem through function, data and process models. At the same time, it shows how design specifications can be employed to translate requirements definitions into concrete system implementations.

Business Process Engineering Study Edition August-Wilhelm Scheer, 2013-11-11 The 1st study edition is based on the 2nd hardcover edition of *Business Process Engineering*. Several inconsistencies and minor modifications have been carried out. This study edition is a response to many requests for a budget priced edition for students. This edition pursues a holistic descriptive approach that is based on the Architecture of Integrated Information Systems (ARIS) developed by the author. In addition to the data view, this approach also comprises the function, organization and control views and encompasses all phases of the information system lifecycle from analysis, requirements definition and design specification to implementation. The reference models developed here can thus serve as initial models for concrete applications. The illustrations are oriented strongly toward standard software in order to reflect their significance in terms of real world representations. In particular, the discussion applies examples from the R/3 system from SAP AG and from the systems from IDS Prof. Scheer GmbH, built on concepts developed by the author. No user description of concrete systems is provided; instead, general foundations are laid in order to facilitate a deeper understanding of the

application logic that is reflected in standard software An attempt is made to close the gap between business administration theory and the operating instructions of standard software **Business Process Engineering** August-Wilhelm Scheer,1994
