Darboux Transformations And Solitons:

Darboux Transformations and Solitons Vladimir B. Matveev, Mikhail A. Salle, 1992-09-30 The modern theory of solitons was born in 1967 when Gardner Greene Kruskal and Miura related the solution of the Cauchy initial value problem for the Korteweg de Vries equation to the inverse scattering problem for a one dimensional linear Schrödinger equation Soliton theory is now a large part of theoretical and mathematical physics An important method used to solve related equations is based on the Inverse Scattering Transform IST This IST method has been extended and applied to a large variety of analytically solvable non linear evolution equations including many important examples describing phenomena in nonlinear optics solid state physics hydrodynamics theory of general relativity plasma physics etc In the about twenty years of development the necessary mathematical tools have become rather sophisticated They include the methods of algebraic geometry the machinery of group representations the theory of the local and nonlocal Riemann Hilbert problem and many other higher levels of contemporary mathematics

Bäcklund and Darboux Transformations C. Rogers, W. K. Schief, 2002-06-24 This book explores the deep and fascinating connections that exist between a ubiquitous class of physically important waves known as solitons and the theory of transformations of a privileged class of surfaces as they were studied by eminent geometers of the nineteenth century Thus nonlinear equations governing soliton propagation and also mathematical descriptions of their remarkable interaction properties are shown to arise naturally out of the classical differential geometry of surfaces and what are termed Bäcklund Darboux transformations This text the first of its kind is written in a straightforward manner and is punctuated by exercises to test the understanding of the reader It is suitable for use in higher undergraduate or graduate level courses directed at applied mathematicians or mathematical physicists

Darboux Transformations in Integrable Systems Chaohao Gu, H. Hu, Zixiang Zhou, 2004-12-08 The Darboux transformation approach is one of the most effective methods for constructing explicit solutions of partial differential equations which are called integrable systems and play important roles in mechanics physics and differential geometry This book presents the Darboux transformations in matrix form and provides purely algebraic algorithms for constructing the explicit solutions A basis for using symbolic computations to obtain the explicit exact solutions for many integrable systems is established Moreover the behavior of simple and multi solutions even in multi dimensional cases can be elucidated clearly The method covers a series of important equations such as various kinds of AKNS systems in $R^{1,n}$ harmonic maps from 2 dimensional manifolds self dual Yang Mills fields and the generalizations to higher dimensional case theory of line congruences in three dimensions or higher dimensional space etc All these cases are explained in detail This book contains many results that were obtained by the authors in the past few years Audience The book has been written for specialists teachers and graduate students or undergraduate students of higher grade in mathematics and physics

Rogue and Shock Waves in Nonlinear Dispersive Media Miguel Onorato, Stefania Resitori, Fabio Baronio, 2016-09-19 This self contained set of lectures addresses a gap in the literature by providing a systematic link between the theoretical foundations of the subject matter and cutting edge applications in both geophysical fluid dynamics and nonlinear optics Rogue and shock waves are phenomena that may occur in the propagation of waves in any nonlinear dispersive medium Accordingly they have been observed in disparate settings as

ocean waves in nonlinear optics in Bose Einstein condensates and in plasmas Rogue and dispersive shock waves are both characterized by the development of extremes for the former the wave amplitude becomes unusually large while for the latter gradients reach extreme values Both aspects strongly influence the statistical properties of the wave propagation and are thus considered together here in terms of their underlying theoretical treatment This book offers a self contained graduate level text intended as both an introduction and reference guide for a new generation of scientists working on rogue and shock wave phenomena across a broad range of fields in applied physics and geophysics

Applications of Analytic and Geometric Methods to Nonlinear Differential Equations P.A. Clarkson, 1993-09-30 In the study of integrable systems two different approaches in particular have attracted considerable attention during the past twenty years 1 The inverse scattering transform IST using complex function theory which has been employed to solve many physically significant equations the soliton equations 2 Twistor theory using differential geometry which has been used to solve the self dual Yang Mills SDYM equations a four dimensional system having important applications in mathematical physics Both soliton and the SDYM equations have rich algebraic structures which have been extensively studied Recently it has been conjectured that in some sense all soliton equations arise as special cases of the SDYM equations subsequently many have been discovered as either exact or asymptotic reductions of the SDYM equations Consequently what seems to be emerging is that a natural physically significant system such as the SDYM equations provides the basis for a unifying framework underlying this class of integrable systems i e soliton systems This book contains several articles on the reduction of the SDYM equations to soliton equations and the relationship between the IST and twistor methods The majority of nonlinear evolution equations are nonintegrable and so asymptotic numerical perturbation and reduction techniques are often used to study such equations This book also contains articles on perturbed soliton equations Painlevé analysis of partial differential equations studies of the Painlevé equations and symmetry reductions of nonlinear partial differential equations
