## **Darwinian Evolution:**

The Reception of Darwinian Evolution in Britain, 1859-1909 Martin Hewitt, 2024-10-20 The Reception of Darwinian Evolution in Britain 1859 1909 Darwinism's Generations uses the impact of Charles Darwin's *On the Origin of Species* 1859 in the 50 years after its publication to demonstrate the effectiveness of a generational framework for understanding the cultural and intellectual history of Britain in the nineteenth century It challenges conventional notions of the Darwinian Revolution by examining how people from across all sections of society actually responded to Darwin's writings Drawing on the opinions and interventions of over 2 000 Victorians drawn from an exceptionally wide range of archival and printed sources it argues that the spread of Darwinian belief was slower more complicated more stratified by age and ultimately shaped far more powerfully by divergent generational responses than has previously been recognised In doing so it makes a number of important contributions It offers by far the richest and most comprehensive account to date of how contemporaries came to terms with the intellectual and emotional shocks of evolutionary theory It makes a compelling case for taking proper account of age as a fundamental historical dynamic and for the powerful generational patternings of the effects that age produced It demonstrates the extent to which the most common sub periodisation of the Victorian period are best understood not merely as constituted by the exigencies of events but are also formed by the shifting balance of generational influence Taken together these insights present a significant challenge to the ways historians currently approach the task of describing the nature and experience of historical change and have fundamental implications for our current conceptions of the shape and pace of historical time

**The Eclipse of Darwinism** Peter J. Bowler, 1983 In this pioneering study of the first major challenges to Darwinism Peter J Bowler examines the competing theories of evolution identifies their intellectual origins and describes the process by which the modern concept of evolution emerged Describing the variety of influences that drove scientists to challenge Darwin's conclusions Bowler reevaluates the influence of social forces on the scientific community and explores the broad philosophical ideological and social implications of scientific theories

*Darwinism and Evolutionary Economics* John Laurent, John Nightingale, 2001-01-01 This outstanding collection of essays by leading scholars helps explain how evolutionary economics has come of age They show how evolutionary economics offers a progressive and diverse research agenda built on strong foundations These are essays of lasting value J Stanley Metcalfe University of Manchester UK Darwinism is fast becoming an orthodoxy of modern thought a framework within which a wide range of knowledge communities conduct their discourse Ever since its formation Darwinian theory has experienced a close though not always comfortable association with economics Evolutionary economists now appear to show little concern for the consistency of knowledge in their embrace of Darwinism Darwinism and Evolutionary Economics brings together contributions from eminent authors who building on Darwin's own insights and on developments in evolutionary theory offer challenging views on how economics can use evolutionary ideas effectively This collection of critical essays

provides a thorough examination of the application of Darwinian theory to economic thought and will appeal to evolutionary economists and all those with an interest in Darwin innovation and evolutionary science

**Evolution and Transitions in Complexity** Gerard A.J.M Jagers op Akkerhuis,2016-10-18 This book discusses several recent theoretic advancements in interdisciplinary and transdisciplinary integration in the field of evolution While exploring novel views the text maintains a close link with one of the most broadly held views on evolution namely that of Darwinian evolution This work puts forth a new point of view which allows researchers to define in detail the concept of evolution To create this conceptual definition the text applies a stringent object based focus With this focus the editor has been able to develop an object based pattern of evolution at the smallest scale Subsequently this smallest scale pattern is used as an innovative basis for generalizations These generalizations create links between biological Darwinism and generalized Darwinism The object based approach that was used to suggest innovations in the field of Darwinian evolution also allowed for contributions to other topics such as major evolutionary transitions theory the definition of life and the relationships between evolution self organization and thermodynamics Together the chapters of this book and the multidisciplinary reflections and comments of various specialists on these chapters offer an exciting palette of innovative ideas

**Darwin's Legacy: The Status of Evolutionary Archaeology in Argentina** Marcelo Cardillo,Hernán Muscio,2016-01-22 This book collects the contributions to the symposium The current state of evolutionary archeology in Argentina that was held in Buenos Aires for celebrating the 200th anniversary of Charles Darwin s birth and the 150th anniversary of the publication of *On the Origin of Species*

Prebiotic Chemistry and Life's Origin Michele Fiore,2022-06-29 How life originated from the inanimate mixture of organic and inorganic compounds on the primordial earth remains one of the great unknowns in science This origin of life or abiogenesis continues to be examined in the context of the conditions and materials required for natural life to have begun on Earth both theoretically and experimentally This book provides a broad but in depth analysis of the latest discoveries in prebiotic chemistry from the microscopic to the macroscopic scale utilising experimental insight to provide a bottom up approach to plausibly explaining how life arose With contributions from global leaders this book is an ideal reference for postgraduate students and a single source of comprehensive information on the latest technical and theoretical advancements for researchers in a variety of fields from astrochemistry and astrophysics to organic chemistry and evolution

**Darwin and International Relations: On the Evolutionary Origins of War and Ethnic Conflict** Bradley A. Thayer,2009

Darwin's Dangerous Idea Daniel Clement Dennett,1995 Proponet of Charles Darwin s theory of evolution discusses how the idea has been distorted and the correct way to think about evolution and examines challenges to the theory and its impact on the future of humans

Darwinian Evolution and Classical Liberalism Stephen C. Dille,2013-05-02 Darwinian Evolution and Classical Liberalism canvasses an array of thinkers from the past to the present as it examines fundamental political philosophical ethical economic anthropological and scientific aspects of the ferment between Darwinian

biology and classical liberalism Early chapters focus on classical thinkers like John Locke and Adam Smith while later chapters provide analyses of present day classical liberals focusing especially on F A Hayek Thomas Sowell and Larry Arnhart the most prominent advocates of contemporary classical liberalism Thematically the volume falls into three parts Part I examines foundational matters arguing that Darwinism and classical liberalism hold incompatible visions of morality human nature and individual autonomy This section also contends that the free market s spontaneous order is fully compatible with a teleological or non Darwinian view of the universe Part II turns to contemporary applications contending that Darwinism and classical liberalism are at odds in their views of or implications about limited government vital religion economic freedom and the traditional family This section also argues that since its inception Darwinism has attenuated core tenets and values of classical liberalism and Western civilization Part III of the volume contains alternative views to those in the first two parts adding critical diversity to the book Respectively these chapters hold that Darwinian evolution simply has little to say about classical liberalism an evolutionary account of human volition is fully compatible with the individual choice presupposed in classical liberalism and evolutionary naturalism unlike religious alternatives provides a strong foundation for freedom morality and the traditional family

*The Edge of Evolution* Michael J. Behe, 2007-06-05 When Michael J Behe s first book Darwin s Black Box was published in 1996 it launched the intelligent design movement Critics howled yet hundreds of thousands of readers and a growing number of scientists were intrigued by Behe s claim that Darwinism could not explain the complex machinery of the cell Now in his long awaited follow up Behe presents far more than a challenge to Darwinism He presents the evidence of the genetics revolution the first direct evidence of nature s mutational pathways to radically redefine the debate about Darwinism How much of life does Darwin s theory explain Most scientists believe it accounts for everything from the machinery of the cell to the history of life on earth Darwin s ideas have been applied to law culture and politics But Darwin s theory has been proven only in one sense There is little question that all species on earth descended from a common ancestor Overwhelming anatomical genetic and fossil evidence exists for that claim But the crucial question remains How did it happen Darwin s proposed mechanism random mutation and natural selection has been accepted largely as a matter of faith and deduction or at best circumstantial evidence Only now thanks to genetics does science allow us to seek direct evidence The genomes of many organisms have been sequenced and the machinery of the cell has been analyzed in great detail The evolutionary responses of microorganisms to antibiotics and humans to parasitic infections have been traced over tens of thousands of generations As a result for the first time in history Darwin s theory can be rigorously evaluated The results are shocking Although it can explain marginal changes in evolutionary history random mutation and natural selection explain very little of the basic machinery of life The edge of evolution a line that defines the border between random and nonrandom mutation lies very far from where Darwin pointed Behe argues convincingly that most of the mutations that have defined the history of life on earth have been nonrandom Although it will be controversial and stunning

this finding actually fits a general pattern discovered by other branches of science in recent decades The universe as a whole was fine tuned for life From physics to cosmology to chemistry to biology life on earth stands revealed as depending upon an endless series of unlikely events The clear conclusion The universe was designed for life **Time Frames** Niles Eldredge,1985 Describes the new evolutionary theory of punctuated equilibria argues that changes in species are rare but happen in rapid bursts and examines the fossil record of invertebrates Darwinian Evolution Antony Flew, Darwinian Evolution is a study of the historical background of Darwin s ideas of their logical structure and of their alleged and actual implications Flew explores the Scottish Enlightenment an important and often neglected aspect of Darwin s intellectual background He compares Darwin with such figures as Adam Smith Thomas Malthus and Karl Marx emphasizing not the similarities but the differences between the natural and social sciences Flew argues that social science must do what natural science does not take account of individual choice *Evolution After Darwin: The evolution of life* Sol Tax,1960 Papers presented at the University of Chicago Darwin centennial celebration in November 1959 Vol 3 includes index for the set and a record of the celebration **Societal Evolution** Albert Galloway Keller,1915 **Classified Catalogue of the Carnegie Library of Pittsburgh, 1895-1902** Carnegie Library of Pittsburgh,1904 **Chambers's Encyclopædia** ,1889 **Chambers's encyclopædia** Chambers W. and R., ltd,1901 **America's Darwin** Tina Gianquitto, Lydia Fisher,2014 An engaging collection of interdisciplinary essays on the distinctive qualities of America s textual engagement with Darwinian evolutionary theory especially in regard to *On the Origin of Species* which highlights the influence of prevalent cultural anxieties on interpretation **Classified Catalogue of the Carnegie Library of Pittsburgh** Carnegie Library of Pittsburgh,1907
