When multiple forces act on an object, they can combine to cause an object to accelerate, decelerate, or change direction. Understanding how forces and acceleration are related is a key concept in physics. This passage explains the relationship between force and acceleration and how it affects an object's motion.</p> <p>Newton's second law of motion states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if you apply a larger force to an object, it will accelerate more. Similarly, if you apply the same force to a heavier object, it will accelerate less.</p> <p>Forces also interact to cause an object to change its direction. When multiple forces act on an object, they can combine to cause the object to change its direction. This is why a car can turn a corner or a ball can change its direction when it is hit by a bat. Understanding how forces and acceleration are related is a key concept in physics.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Normal force</li> <li>Friction</li> <li>Acceleration</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Normal force</li> <li>Friction</li> <li>Acceleration</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Normal force</li> <li>Friction</li> <li>Acceleration</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Gravity</li> <li>Normal force</li> <li>Friction</li> <li>Acceleration</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
