

### The key to Equator homogeneity

The key to Equator homogeneity is the presence of a large, dark, layered rock specimen, which is a remnant of the Earth's early history. This rock is composed of various minerals and is believed to be a remnant of the Earth's early crust. The layers of the rock are thought to represent different stages of the Earth's early development, from the formation of the crust to the formation of the mantle. The rock is a valuable resource for scientists studying the Earth's early history and the formation of the planet.
