

Alternative Computing Architectures As a Solution to the Application of Moore's Law Energy Consumption

Energy consumption is a major concern for data centers and cloud providers. As the number of servers and the amount of data processed increase, the energy consumption of data centers is growing rapidly. This is a major challenge for the industry, as energy consumption is a major cost factor and a major environmental concern.

Moore's Law, which states that the number of transistors on a microchip doubles approximately every two years, is a key driver of the growth of data centers. However, as the number of transistors increases, the energy consumption of the chips also increases, leading to a significant increase in the energy consumption of data centers.
