Featuring an exceptional range of visual material supported by lucidly written text. An Atlas of Orthopedic Surgery: A Guide to Management and Practice helps clinicians in the management of their orthopedic patients. Developed by distinguished specialists in the field, the atlas covers practical issues relating to the diagnosis and treatment of bone pathology, including analysis by body part, biomechanics, physical examination, and appropriate interventions. The combination of state-of-the-art illustrations and authoritative information provides a clear picture of the disease and its treatment.

Colour Atlas of Bone, Joint, and Soft Tissue Pathology Nikos Athanasou, 1999. The purpose of this atlas is to provide an illustrated guide to the diagnosis of bone, joint, and soft tissue lesions. Although primarily directed towards histopathologists, it will also be of use to physicians, surgeons, radiologists, and others involved in the diagnosis and treatment of pathological conditions of bone, joint, and soft tissues. As the pathology of bone, joint, and soft tissues is commonly dealt with separately in other works, one of the aims of this atlas is to present in a single volume the appearances of the neoplastic as well as the more common non-neoplastic conditions encountered in orthopaedic pathology. The photomicrographs in this atlas provide representative appearances of the often highly variable morphological features of pathological lesions occurring in bone, joint, and soft tissue. Where possible, the pathology is shown at both low power and high power in order to demonstrate both in order to demonstrate both the overall architecture and cytological detail of the lesion. As examination of gross specimen may provide useful diagnostic information, the macroscopic appearance of some lesions has also been illustrated. The captions which accompany the figures not only describe the histological findings but also, as this often provides essential diagnostic information, the clinical background and radiological features of each lesion.
