Bringing Out the Algebraic Character of Arithmetic Analúcia D. Schliemann, David W. Carraher, Bárbara M. Brizuela, 2006-08-29 Bringing Out the Algebraic Character of Arithmetic contributes to a growing body of research relevant to efforts to make algebra an integral part of early mathematics instruction an area of studies that has come to be known as Early Algebra It provides both a rationale for promoting algebraic reasoning in the elementary school curriculum and empirical data to support it The authors regard Early Algebra not as accelerated instruction but as an approach to existing topics in the early mathematics curriculum that highlights their algebraic character Each chapter shows young learners engaged in mathematics tasks where there has been a shift away from computations on specific amounts toward thinking about relations and functional dependencies The authors show how young learners attempt to work with mathematical generalizations before they have learned formal algebraic notation The book suitable as a text in undergraduate or graduate mathematics education courses includes downloadable resources with additional text and video footage on how students reason about addition and subtraction as functions on how students understand multiplication when it is presented as a function and on how children use notations in algebraic problems involving fractions These three videopapers written text with embedded video footage present relevant discussions that help identify students mathematical reasoning The printed text in the book includes transcriptions of the video episodes in the CD ROM Bringing Out the Algebraic Character of Arithmetic is aimed at researchers practitioners curriculum developers policy makers and graduate students across the mathematics education community who wish to understand how young learners deal with algebra before they have learned about algebraic notation

Mechatronics by Bond Graphs Vjekoslav Damic, John Montgomery, 2012-12-06 Bondgraphs are a well established technique for the modelling of complex engineering systems The subject of this book is an integrated modelling and simulation of mechatronics systems in a visual computer environment The modelling is based on system top down and bottom up approach The mathematical models are generated in a form of differential algebraic equations and solved using numerical and symbolic algebra methods The authors carefully explain a systematic procedure for developing the models using simple visual commands and construct a bondgraph at every level of decomposition The integrated approach they develop is applied

to mechanical electrical and control systems multibody dynamics and continuous systems The book contains a powerful computer simulation package on the accompanying CD ROM The BondSim package supports top down and bottom up model development using component libraries New York Math: Math B ,2000 Resources in Education ,1996
