Summary. In this article we further develop field theory in Mizar [1], [2], [3] towards splitting fields. We deal with algebraic extensions [4], [5]: a field extension E of a field F is algebraic, if every element of E is algebraic over F . We prove amongst others that finite extensions are algebraic and that field extensions generated by a finite set of algebraic elements are finite. From this immediately follows that field extensions generated by roots of a polynomial over F are both finite and algebraic. We also define the field of algebraic elements of E over F and show that this field is an intermediate field of $E|F$.

1. PRELIMINARIES

Let L_1, L_2 be double loop structures. We say that $L_1 \approx L_2$ if and only if (Def. 1) the double loop structure of $L_1 =$ the double loop structure of L_2 .

One can verify that the predicate is reflexive and symmetric.

Now we state the propositions:

- (1) Let us consider rings R, S . Then $R \approx S$ if and only if there exists a function f from R into S such that $f = \text{id}_R$ and f is isomorphism.
- (2) Let us consider strict rings R, S . Then $R \approx S$ if and only if $R = S$.

Let F_1, F_2 be fields. Let us note that $F_1 \approx F_2$ if and only if the condition (Def. 2) is satisfied.
