Classgroups And Hermitian Modules:

Classgroups and Hermitian Modules Albrecht Fröhlich, 2012-12-06 These notes are an expanded and updated version of a course of lectures which I gave at King's College London during the summer term 1979 The main topic is the Hermitian classgroup of orders and in particular of group rings Most of this work is published here for the first time The primary motivation came from the connection with the Galois module structure of rings of algebraic integers The principal aim was to lay the theoretical basis for attacking what may be called the converse problem of Galois module structure theory to express the symplectic local and global root numbers and conductors as algebraic invariants A previous edition of these notes was circulated privately among a few collaborators Based on this and following a partial solution of the problem by the author Ph Cassou Nogués and M Taylor succeeded in obtaining a complete solution In a different direction J Ritter published a paper answering certain character theoretic questions raised in the earlier version I myself disapprove of secret circulation but the pressure of other work led to a delay in publication I hope this volume will make amends One advantage of the delay is that the relevant recent work can be included In a sense this is a companion volume to my recent Springer *Ergebnisse Bericht* where the Hermitian theory was not dealt with Our approach is via Hom groups analogous to that followed in recent work on locally free classgroups Classgroups and Hermitian Modules Albrecht Fröhlich, 1984-01-01 **Galois Module**

Structure Victor Percy Snith, 1994-01-01 This is the first published graduate course on the Chinburg conjectures and this book provides the necessary background in algebraic and analytic number theory cohomology representation theory and Hom descriptions The computation of Hom descriptions is facilitated by Snith's Explicit Brauer Induction technique in representation theory In this way illustrative special cases of the main results and new examples of the conjectures are proved and amplified by numerous exercises and research problems **Séminaire de Théorie Des Nombres D.**

Biographical Memoirs of Fellows of the Royal Society Royal Society (Great Britain), 1955 *Galois Module Structure of Algebraic Integers* A. Fröhlich, 2012-12-06 In this volume we present a survey of the theory of Galois module structure for rings of algebraic integers This theory has experienced a rapid growth in the last ten to twelve years acquiring mathematical depth and significance and leading to new insights also in other branches of algebraic number theory The decisive take off point was the discovery of its connection with Artin L functions We shall concentrate on the topic which has been at the centre of this development namely the global module structure for tame Galois extensions of numberfields in other words of extensions with trivial local module structure The basic problem can be stated in down to earth terms the nature of the obstruction to the existence of a free basis over the integral group ring normal integral basis Here a definitive pattern of a theory has emerged central problems have been solved and a stage has clearly been reached when a systematic account has become both possible and desirable Of course the solution of one set of problems has led to new questions and it will be our aim also to discuss some of these We hope to help the reader early on to an understanding of the basic structure of our theory and of its central theme and to motivate at each successive stage the introduction of new concepts and new tools **American Journal of Mathematics**, 1997 *Séminaire de théorie des nombres, Paris, 1989-90* Sinnou David, 1992 **Publicationes mathematicae** Kossuth Lajos Tudományegyetem.
