

Method	Pros	Cons
MVPCA	All bands are ranked by the variance of band capacity.	Redundancy of band information is not considered.
UBS	Using divergence based on the analysis of band features, it tries to solve the redundancy problem caused by sorting algorithm.	The spatial information of HSI is not considered.
FDPC	It is a clustering method based on weighted normalized local density and ranking.	The selected bands do not necessarily contain the most information, and different metrics will affect the results. Moreover, the random initialization of the clustering algorithm is uncertain.
FA	FA can reduce the complexity of the ELM (extreme learning machine) network, and is suitable for optimizing the parameters in the network. It converges faster compared with PSO.	It is sensitive to parameters and will be less attractive when the dimension is high, affecting the result update.
PSO	It is a probabilistic global optimization algorithm that is relatively simple and easier to implement.	Its peak seeking rate and solution accuracy are low.
ABA (Attention-Based Autoencoders)	This method presents an automatic encoder based on an attention mechanism to realize the <del>non-linear relationship between</del>	The optimization process of its hyperparameters is random, which leads to the instability of
