Douglas Rayner Hartree His Life In Science And Computing:

Douglas Rayner Hartree Charlotte Froese Fischer, 2003 This scientific biography of Douglas R Hartree not only describes important events in his life but also outlines his contributions to a number of fields He is best known for his self consistent field theory for atoms a theory he later used for the much more difficult problem of predicting the behavior of a magnetron When Fock pre-empted his work on exchange he began research into radio wave propagation Hartree was very interested in the process of computation When he learned of a differential analyzer for solving differential equations he first built a model using Meccano a toy for children The success of this model spread the notion of using devices to solve scientific problems Application of the analyzer led Hartree to control theory and fluid dynamics In both these areas he made significant original contribution With his extensive computing background he was selected as the first civilian to evaluate the possibility of applying the US ENIAC computer to nonmilitary problems His research touched the lives of many scientists

ENIAC in Action Thomas Haigh, Mark Priestley, Crispin Rope, 2016-06-24 The history of the first programmable electronic computer from its conception construction and use to its afterlife as a part of computing folklore Conceived in 1943 completed in 1945 and decommissioned in 1955 ENIAC the Electronic Numerical Integrator and Computer was the first general purpose

programmable electronic computer But ENIAC was more than just a milestone on the road to the modern computer During its decade of operational life ENIAC calculated sines and cosines and tested for statistical outliers plotted the trajectories of bombs and shells and ran the first numerical weather simulations ENIAC in Action tells the whole story for the first time from ENIAC s design construction testing and use to its afterlife as part of computing folklore It highlights the complex relationship of ENIAC and its designers to the revolutionary approaches to computer architecture and coding first documented by John von Neumann in 1945 Within this broad sweep the authors emphasize the crucial but previously neglected years of 1947 to 1948 when ENIAC was reconfigured to run what the authors claim was the first modern computer program to be executed a simulation of atomic fission for Los Alamos researchers The authors view ENIAC from diverse perspectives as a machine of war as the first computer as a material artifact constantly remade by its users and as a subject of contradictory historical narratives They integrate the history of the machine and its applications describing the mathematicians scientists and engineers who proposed and designed ENIAC as well as the men and particularly the women who built programmed and operated it [Great Scientists Wage the Great War](#) William van der Kloot ,2017-01-24
