## **Biodiversity Conservation:**

*The Economics of Biodiversity Conservation* K. N. Ninan, 2012 Economic valuation of biodiversity and ecosystem services is possibly the most powerful tool for halting the loss of biodiversity while maintaining incomes and livelihoods Yet rarely have such approaches been applied to tropical forest hotspots which house the vast majority of the planets plant and animal species This ground breaking work is the most comprehensive and detailed examination of the economics of environmental valuation and biodiversity conservation to date Focusing on the Western Ghats of India one of the top biodiversity hotspots in the world this volume looks at a cross section of local communities living within or near sanctuaries and reserve forests such as coffee growers indigenous people and farmers cum pastoralists to assess the use and non use values that people derive from tropical forests It also looks at the extent of their dependence on forests for various goods and services and examines their perceptions and attitudes towards biodiversity conservation and wildlife protection The book concludes with an assessment of the institutional alternatives and policies for promoting biodiversity conservation through economic valuation methods Related titles *Economics for Collaborative Environmental Management* 2005 1 84407 095 6 Conservation Biology for All Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-07 *Conservation Biology for All* provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conversion and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources **Policy and Practice in Climate Change and Biodiversity Conservation** Asha Ramachandran, 2024-12-11 Climate change and biodiversity decline are the major challenges humankind is now facing with profound consequences for people and the ecosystems Continuous policy crafting is a prerequisite in mitigating climate change maladies as the world is witnessing an unprecedented eruption of climate induced catastrophes including heat waves hurricanes unseasonal rain and diseases spurred by climate change and globalization This book gives a bird s eye view of climate change biodiversity conservation and practical policy imperatives for mitigating inauspicious climate impacts in a

globalized digital era The briefing looks at the relationships and describes policies that promote the interconnectedness of biodiversity and climate action which is essential for effective environmental stewardship This also conveys how improperly resolving one problem can make it harder to improve another The book is useful for academics policy makers scholars researchers health professionals and people involved in climate change research and mitigation strategies **Links**

Hilty, Annika T.H. Keeley, William Z. Lidicker Jr., Adina M. Merenlender, 2019-04-23 Migrating wildlife species across the globe face a dire predicament as their traditional migratory routes are cut off by human encroachment Forced into smaller and smaller patches of habitat they must compete more aggressively for dwindling food resources and territory This is more than just an unfortunate side effect of human progress As key species populations dwindle ecosystems are losing resilience and face collapse and along with them the ecosystem services we depend on Healthy ecosystems need healthy wildlife populations One possible answer Wildlife corridors that connect fragmented landscapes This new and expanded second edition of Corridor Ecology Linking Landscapes for Biodiversity Conservation and Climate Adaptation captures the many advances in the field over the past ten years It builds on concepts presented in the first edition on the importance and practical details of maintaining and restoring land connectivity New to this edition is a guest edited chapter on ecological connectivity in oceans including a detailed discussion on pelagic marine corridors and how coastal corridors can provide critical connectivity between marine protected areas Another new chapter considers the effects of climate change on habitat and offers recommendations on designing effective corridors as landscapes change with shifting climate conditions The book also includes a discussion of corridors in the air for migrating flying species from birds to bats butterflies and even plant propagules a concept so new that a term to describe it has yet to be coined All chapters are thoroughly revised and updated Practitioners as well as serious scholars of landscape ecology and the science of protecting biodiversity will find this new edition of corridor ecology science an indispensable resource Biodiversity Conservation and Habitat Management - Volume I Francessa Gherardi, Claudia Corti, Manuela Gualtieri, 2009-12-29 Biodiversity Conservation and Habitat Management is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Biodiversity is declining worldwide at a very unprecedented rate as a complex response to several human induced changes in the global environment The magnitude of these changes is so large and their effects are so strongly linked to the altered ecosystem processes and to human abuse of natural resources that biodiversity loss is today perceived as one of the most important issues that humankind should face with extreme urgency Disseminating information raising awareness and propelling concern within a diversified target audience general public schools local authorities and government agencies are also essential to develop shared responsibility and to encourage collaborative efforts and compliance This has been the main objective of Biodiversity Conservation and Habitat Management The Theme on Biodiversity Conservation and Habitat Management provides the essential aspects and a myriad of issues of great relevance to our world in eight major topics of discussion and is focused on 1 History and Overview of Biodiversity Conservation and Protected Areas 2 Management of Forests and other Wooded

Habitats 3 Management of Savannahs and Other Open Habitats 4 Management of Wetlands 5 Management of Tourism and Human Recreation Pressure 6 Conservation Strategies Species Action Plans and Translocation 7 Captive Breeding and Gene Banks and 8 Eradication and Control of Invasive Species These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

OECD Environmental Performance Reviews: Greece 2020 OECD,2020-10-05 Greece has undergone extensive reforms to cope with a deep recession over the past decade It has made progress in decoupling air pollutant emissions from GDP and improving the conservation status of natural habitats However the country faces challenges in managing waste and water and addressing air pollution

*Participatory Biodiversity Conservation* Cristina Baldauf,2020-05-13 It has long been claimed that addressing biodiversity loss and other environmental problems demands a better understanding of the social dimensions of conservation nevertheless the active participation of indigenous peoples and local communities IPLCs in conservation initiatives is still a challenging and somehow controversial issue In this context this book hopes to give voice to other perspectives related to biodiversity conservation beyond the fortress conservation model and emphasize one of the pillars of democracy popular participation It covers a wide range of environments and issues of special significance to the topic such as the expansion of culturally constructed niches protected areas and food security community based management participatory agroforestry productive restoration and biocultural conservation The contents also explore the limitations and shortcomings of participatory practices in protected areas the relationship between the global crisis of democracy and the decline of biocultural diversity as well as present current discussions on policy frameworks and governance systems for effective participatory biodiversity conservation In sum this book provides a comprehensive and realistic perspective on the social dimensions of conservation based on a series of interrelated themes in participatory biodiversity conservation The connections between biocultural conservation and the current political and economic environment are highlighted through the chapters and the book closes with a debate on ways to reconcile human welfare environmental justice and biodiversity conservation

**Biodiversity Conservation, Indigenous Knowledge and practices: A Naga Perspective** Martemjen,2017-08-24 Conservationist has been contemptuous of Indigenous peoples and their knowledge As such all the modern polices acts and laws in biodiversity conservation intends to follow a top down approach where decisions to be enacted upon the local people their land biodiversity forest etc are done at the top level without the local peoples consent which ultimately leads to conflict As such the author through this book advocates for the implementation of two pronged policy i e bottom up and top down approach for a practical and effective biodiversity conservation While the conservationist environmentalist and policy makers view the forested lands as the last resort for biodiversity conservation to the local people it is their only source of livelihood The author draws attention on the Naga indigenous knowledge system in the light of United Nations Convention on Biological

Diversity UN CBD through which they were able to sustainably manage and conserve their biodiversity while obtaining their livelihood from the same. This book will help discover a deeper measure and value of the Naga indigenous knowledge system and will act as a resourceful material to students, researchers, activists, and local people in their quest to comprehend the important dynamics of biodiversity conservation and indigenous knowledge. It will also serve as a valuable reference for indigenous peoples and policy makers all around the world who seek to understand and implement indigenous knowledge systems in broader emerging biodiversity conservation policies and strategies.

**Last Stand** Randall A. Kramer, Carel van Schaik, Julie Johnson, 1997. During the past century, tropical rain forests have been reduced to about half of their original area with a consequent loss of biodiversity. This book takes a close look at how this has happened and what the consequences may be, with an emphasis on those strategies that have proven successful in stemming the loss of plant and animal inhabitants. It describes the use of protected areas such as sacred groves, royal preserves, and today's national parks, which have long served to shield the delicate forest habitats for countless species. Although programs for protecting habitats are under increasing attack, this book argues that a system of protected areas must in fact be the cornerstone of all conservation strategies aimed at limiting the inevitable reduction of our planet's biodiversity. Written by leading experts with years of experience, the book integrates ecological, economic, and political perspectives on how best to manage tropical forests and their inhabitants throughout the world. In addition to conservationists, policy makers, and ecologists, the book will serve as a useful text in courses on tropical conservation.

*Biodiversity Conservation Handbook* Robert B. McKinstry, 2006. Includes bibliographical references and index.

*Biodiversity Islands: Strategies for Conservation in Human-Dominated Environments* Florencia Montagnini, 2022-04-22. This book is intended to provide an overview for the identification and establishment of biodiversity islands. It presents examples and case studies where the biodiversity islands approach is being used in a variety of locations and contexts worldwide. It will contribute to design parameters on appropriate sizing and spatial distribution of biodiversity islands in order to be effective in conservation and regeneration across the landscape using integrated landscape management approaches. This book is essential given the current worldwide trend of habitat destruction and the need to preserve biodiversity and its values. The chapters are organized in five sections. The first section provides the introduction. Sections 2, 3, and 4 discuss the challenges and alternatives of establishment and management case studies across the globe, safeguarding of the environmental, economic, and social benefits, and the final section offers a conclusion. The contributing authors present views from the academic, the practitioner, and the policymaker perspectives, offering alternatives and suggestions for promoting strategies that support biodiversity conservation through intentionally designed frameworks for sustainable forest landscapes. Readers will discover suggestions and concrete examples that can be used by a variety of stakeholders in various settings throughout the world. This book is useful to researchers, farmers, foresters, landowners, land managers, city planners, and policy makers alike.

*Harvesting Wild Species* Curtis H.

Freese,1997 In *Harvesting Wild Species* Curtis Freese draws together a diverse group of authorities to discuss the conditions under which commercial use may serve as a conservation tool Presenting fifteen case studies from around the world in areas ranging from fisheries and forestry to non timber forest products and trophy hunting the authors explore the link between sustainable development and biodiversity conservation Based on a study commissioned by the World Wide Fund for Nature *Harvesting Wild Species* aims to raise among environmentalists policy makers funding agencies students and researchers an awareness of the role of economic incentives in conservation efforts *Ethics in Biodiversity Conservation* Patrik Baard,2021-11-28 This book examines the role of ethics and philosophy in biodiversity conservation The objective of this book is two fold on the one hand it offers a detailed and systematic account of central normative concepts often used but rarely explicated nor justified within conservation biology Such concepts include values both intrinsic instrumental and more recently relational rights and duties The second objective is to emphasize to environmental philosophers and applied ethicists the many interesting decision making challenges of biodiversity conservation The book argues that a nuanced account of instrumental values provides a powerful tool for reasoning about the values of biodiversity It also scrutinizes relational values the concept of rights of nature and risk and show how moral philosophy proves indispensable for these concepts Consequently it engages with recent suggestions on normative aspects of biodiversity conservation and show the need for moral philosophy in biodiversity conservation The overriding aim of this book is to provide conservation biologists and policy makers with a systematic overview of concepts and assessments of the reasons for reaching prescriptive conclusions about biodiversity conservation This will prove instrumental in clarifying the role of applied ethics and a refined understanding of the tools it can provide This title will be of interest to students and scholars of conservation biology conservation policy environmental ethics and environmental philosophy *Designing Field Studies for Biodiversity Conservation* Peter Feinsinger,2001-07-01 Anyone working in biodiversity conservation or field ecology should understand and utilize the common sense process of scientific inquiry observing surroundings framing questions answering those questions through well designed studies and in many cases applying results to decision making Yet the interdisciplinary nature of conservation means that many workers are not well versed in the methods of science and may misunderstand or mistrust this indispensable tool *Designing Field Studies for Biodiversity Conservation* addresses that problem by offering a comprehensible practical guide to using scientific inquiry in conservation work In an engaging and accessible style award winning tropical ecologist and teacher Peter Feinsinger melds concepts methods and intellectual tools into a unique approach to answering environmental questions through field studies Focusing on the fundamentals of common sense independent thinking and natural history he considers framing the question and designing the study interpreting and applying results through judicious use of statistical inference taking into account the natural history of plants animals and landscapes monitoring and assessing progress through approaches such as bioindicator species or species diversity measures

helping other interested parties park guards local communities school teachers use scientific inquiry in addressing their own concerns Detailed appendixes explain technical issues while numerous sidebars and illustrations provide important background and thought provoking exercises Throughout the author challenges the reader to integrate conceptual thinking with on the ground practice in order to make conservation truly effective Feinsinger concentrates on examples from Latin America but stresses that the approach applies to local conservation concerns or field biology questions in any landscape

Designing Field Studies for Biodiversity Conservation is an essential handbook for staff and researchers working with conservation institutions or projects worldwide as well as for students and professionals in field ecology wildlife biology and related areas

Meta-Scenario Computation for Social-Geographical Sustainability Jun Yang, Bing Xue, Xiangming Xiao, Jianhong Xia, Xinli Ke, 2023-03-02

**Contested Nature** Steven R. Brechin, Peter R. Wilshusen, Crystal L. Fortwangler, Patrick C. West, 2012-02-01 How can the international conservation movement protect biological diversity while at the same time safeguarding the rights and fulfilling the needs of people particularly the poor Contested Nature argues that to be successful in the long term social justice and biological conservation must go hand in hand The protection of nature is a complex social enterprise and much more a process of politics and of human organization than ecology Although this political complexity is recognized by practitioners it rarely enters into the problem analyses that inform conservation policy

Structured around conceptual chapters and supporting case studies that examine the politics of conservation in specific contexts the book shows that pursuing social justice enhances biodiversity conservation rather than diminishing it and that the fate of local peoples and that of conservation are completely intertwined

## Unveiling the Magic of Words: A Report on "**Biodiversity Conservation**"

In some sort of defined by information and interconnectivity, the enchanting power of words has acquired unparalleled significance.
