discusses psychotherapeutic cognitive and social approaches to treatment The final section focuses on such special issues as transcultural problems SAD and suicide Chapters also examine the relationship of depression to childbirth childhood and adolescent turmoil and treatment in primary care and medical settings Distinctive in its unexcelled coverage of the most common psychiatric disorders Dr Paykel's *HANDBOOK OF AFFECTIVE DISORDERS SECOND EDITION* is a timely and necessary resource for clinicians researchers and students in psychiatry psychology nursing social work and related mental health and medical disciplines

**Premenstrual Syndrome** Benson Ginsburg, 2012-12-06 As the work on a revised edition of the *Diagnostic and Statistical Manual* progressed a great controversy grew over the inclusion of a new diagnostic category Premenstrual Phase Dysphoric Disorder Some nosologists and scientists who study premenstrual syndrome PMS felt that while a specific psychiatric disorder does exist it occurs relatively rarely The disorder can be characterized by recurrent periods of dysphoria on a monthly basis in synchrony with the menstrual period PMS already exists as a diagnosis in ICD 9 the international medical nomenclature The category for DSM IIIR was to be a specific psychiatric disorder concentrating on the dysphoric reaction and not including all of the physical and mental symptoms that people have ascribed to this condition Much of the controversy that ensued had little to do with the diagnostic category or the condition itself Rather it concerned feelings voiced by feminist groups that the new diagnostic category would be misleading that it would inappropriately label women as mentally ill and that it would be affixed not only to the dysphoric disorder but everything else that happens psychiatrically to women *American Journal of Psychotherapy*, 1947

**Neurotic Disorders in the Elderly** James Lindesay, 1995 Current psychiatric research is dominated by taxonomies that emphasise the discontinuities and differences between diseases rather than continuities and similarities In this environment it may seem rather heretical to use words like Neurosis in a professional psychiatric context However the authors of this book posit the view that much more can be learned from taking a broad dimensional view of neurotic disorders in elderly people rather than by adopting the narrow categorical approach of for example the DSM classifications To this end the book is organized by areas of interest epidemiology clinical assessment and diagnosis the clinical relationship with physical ill health psychosocial factors psychological treatment both behavioural and dynamic and physical treatments In addition there are chapters on personality alcohol and drug abuse eating disorders sex and sleep in the elderly Disturbances and disorders in these areas frequently aggravate and complicate neurotic disorders in old age and it is important that they are considered in this context This book will help any psychiatrist improve their skills in this area and improve the quality of care they provide their elderly patients
