Biological Interactions Of Sulfur Compounds:

Biological Interactions Of Sulfur Compounds Stephen C. Mitchell, 2003-09-02 This text focuses on the biological interactions of sulphur compounds which arise specifically from the presence of the sulphur atom within the molecule The book opens with introductory chapters on the chemistry and biology of sulphur before tackling the field by introducing compounds which share a common chemical combination In general following a description of the uses and impact upon the biological field specific chemical group characteristics are discussed together with the biological activity and structure activity relationships where known The toxicity of such compounds their consequences in biochemical and clinical terms and their mechanisms of biological interaction are then addressed

Soil Microbiology Robert L. Tate, III, 2020-10-08 An updated text exploring the properties of the soil microbial community Today the environmentally oriented specialties of microbiology are shifting from considering a single or a few microbial species to focusing on the entire microbial community and its interactions The third edition of Soil Microbiology has been fully revised and updated to reflect this change with a new focus on microbial communities and how they impact global ecology The third edition still provides thorough coverage of basic soil microbiology principles yet the textbook also expands students understanding of the role the soil microbial community plays in global environmental health and human health They can also learn more about the techniques used to conduct analysis at this level Readers will benefit from the edition s expanded use of figures and tables as well as the recommendations for further reading found within each chapter Considers the impact of environmental perturbations on microbial community structure as well as the implications for soil system functions Discusses the impact of soil microbial communities on food and health related issues Emphasizes the importance of soil microbial communities on the sustainability of terrestrial ecosystems and solutions to global issues This third edition is a suitable text for those studying soil microbiology and soil ecology at the undergraduate or graduate level It also serves as a valuable reference tool for professionals working in the fields of reclamation and soil management

Chemico-biological Interactions of Sulfide and Organosulfur Compounds [microform] Mohammad Ali Eghbal, 2004 Exposure of isolated hepatocytes to NaHS led to GSH depletion CYP450 inhibitors were protective against NaHS toxicity and prevented GSH depletion Methionine was protective against NaHS and its effect was overcome by inhibition of S adenosyl L homocysteine hydrolase by adenosine This suggests that S adenosylmethionine dependent methylation can detoxify H₂S in the liver The H₂O₂ scavengers were protective against H₂S toxicity H₂S induced ROS formation was dose dependent and pyruvate inhibited this ROS production Nontoxic concentrations of H₂S enhanced the cytotoxicity of H₂O₂ generated by glucose glucose oxidase which was inhibited by CYP450 inhibitors Furthermore hepatocyte ROS formation induced by H₂S was decreased by CYP450 inhibitors cimetidine and benzylimidazole Therefore CYP450 dependent metabolism of H₂S is responsible for inducing ROS production H₂S induced cytotoxicity was preceded by mitochondrial depolarization In this project two aspects of the action of hydrogen

sulfide and reactive sulfur species have been studied cytotoxic and cytoprotective effects Freshly isolated hepatocytes have been used in order to examine the prevalence and mechanisms of the different sulfide dependent processes that influence cell survival and death Our hypothesis is that the exogenous application of high concentrations of HS and other reactive sulfur species to isolated hepatocytes in the presence of various modulators will provide a rapid mechanism dependent screen for ways in which reactive sulfur species can modulate cell survival and death NaHS and or garlic onion derived organosulfur compounds Allyl mercaptan AM and Propyl mercaptan PM protected hepatocytes against hydroquinone methylbenzoquinone and 5 hydroxynaphtoquinone NaHS and mercaptans increased the cytotoxicity of tert butylhydroquinone Treatment of these benzoquinones with allyl mercaptan propanethiol or NaHS led to formation of new compounds which by MS MS analysis were identified as mercaptan conjugates of corresponding hydroquinones Abstract shortened by UMI H₂S allyl mercaptan AM propyl mercaptan PM diallyl disulfide DADS and diallyl sulfide DAS prevented hepatocyte toxicity induced by allyl alcohol 1 bromoethanol and their toxic metabolites MS MS spectrometry revealed adduct formation between AM and or PM with the acrolein and or haloacetaldehyde formed by the metabolism of allyl alcohol and alpha haloethanol H₂S or garlic and onion mercaptans are cytoprotective by trapping toxic aldehyde metabolites and or by preventing lipid peroxidation

Atmospheric Deposition and Forest Nutrient Cycling Dale W. Johnson, Steven E. Lindberg, 2013-11-11 Over the past decade there has been considerable interest in the effects of atmospheric deposition on forest ecosystems This volume summarizes the results of the Integrated Forest Study IFS one of the most comprehensive research programs conducted It involved intensive measurements of deposition and nutrient cycling at seventeen diverse forested sites in the United States Canada and Norway The IFS is unique as an applied research project in its complete ecosystem level evaluation of nutrient budgets including significant inputs outputs and internal fluxes It is also noteworthy as a more basic investigation of ecosystem nutrient cycling because of its incorporation of state of the art methods such as quantifying dry and cloud water deposition Most significantly the IFS data was used to test several general hypotheses regarding atmospheric deposition and its effects The data sets also allow for far reaching conclusions because all sites were monitored over the same period using comparable instruments and standardized protocols

Anaerobic Digestion for Sustainable Development M. J. Lexmond, 2001-09-30 Anaerobic digestion processes for the treatment of wastewaters and sludges are well over 100 years old The anaerobic process is a natural gasification process producing very useful end products It has taken a long time to prove that these processes are useful tools in sustainable development A breakthrough was the development of the Upflow Anaerobic Sludge Bed reactor by Professor Gatze Lettinga This showed that the anaerobic process could be operated as a highly effective and high rate wastewater treatment process opening the way to its implementation under practical conditions It has so far been a struggle to prove the feasibility of anaerobic treatment despite the obvious advantages in energy consumption sludge production and required land area its drawbacks i e required effluent

polishing odours sensitivity to toxic compounds made potential users reluctant to choose anaerobic instead of the conventional aerobic systems However as shown by the contributions in this issue intensive research has overcome most of these drawbacks To celebrate the career of Professor Lettinga leading experts on anaerobic digestion processes were invited to highlight the state of the art and future developments in their specific fields of interest Seminar topics included microbiology treatment of industrial wastewaters xenobiotics and extreme environments the biological S cycle treatment of domestic wastewater and the history of anaerobic digestion The selected 20 papers in these proceedings represent the state of the art of anaerobic digestion highlighting its impacts and potentials They also recognised the stimulating role of Professor Gatzke Lettinga in this development and agree with him that anaerobic digestion s full potential is still unexploited

Soil Microbiology Robert L. Tate,2000-01-24 With its amplified focus on the reclamation of contaminated and damaged soils greenhouse gas production and the sustainability of soil ecosystems the book is an ideal resource for upper level undergraduates and graduate students as well as a useful reference for professionals in soil and environmental science

BOOK JACKET Safety Evaluation of Certain Food Additives and Contaminants Joint FAO/WHO Expert Committee on Food Additives. Meeting,2000 This book evaluates the design and findings of studies relevant to the safety assessment of selected food additives and contaminants The book which is part of a long running series prepared by the Joint FAO WHO Expert Committee on Food Additives JECFA gives toxicologists the food industry and regulatory agencies a record of the scientific evidence considered when the Committee allocates or revises acceptable daily intakes and other endpoints Emphasis is placed on studies that relate specific exposure levels to specific toxic effects or guide the meaningful extrapolation of animal data to the human condition Through its careful attention to questions of study design methodology and the validity of reported data the book also demonstrates the strict safety standards used by JECFA in its efforts to protect consumers from any possible toxicological or pharmacological hazard linked to the use of food additives Separate toxicological monographs are presented for one glazing agent hydrogenated poly 1 decene one sweetening agent erythritol one thickener curdlan and three miscellaneous substances g cyclodextrin sodium iron ethylenediamine tetraacetic acid EDTA and sodium sulfate The volume also includes monographs on two groups of related substances evaluated according to the Procedure for the Safety Evaluation of Flavouring Agents and on the allergenicity potential of peanut and soya bean oils Subsequent monographs summarize the toxicological and intake data available for three food contaminants lead methylmercury and zearalenone and the intake data available for four food additives annatto extracts bixin canthaxanthin erythrosine and iron oxides
