

An Inquiry-based Case Study for Conservation Biology

Nathaniel P. Hitt
Brian R. Murphy

Case studies provide an important tool for inquiry-based science education but require careful consideration of how class activities promote specific learning objectives. Here, we present a case study of the implementation of the Clean Water Act in Stroubles Creek, Virginia. In contrast to a lecture format, our approach achieves learning objectives by requiring students to ask and answer a series of questions related to the case study. First, we present a "teaching case" to be distributed to students. Second, we provide "teaching notes" for instructors to facilitate student activities. Third, we report on our use of this case study during a 50-minute session for an undergraduate course in conservation biology.

Introduction

Case studies offer an important strategy for inquiry-based science education by requiring students to be active participants in addressing a current problem or issue. Unlike traditional lectures, course content in case study teaching stems from the case study itself (Herreid, 1994). This approach implements a constructivist educational strategy by focusing on student integration of new information into an existing framework (Bransford & Brown, 1999) in support of the National Science Education Standard for "inquiry-based" science education (NRC, 2006). In this article, we (1) present an "appraisal" case study (Herreid, 1994) to facilitate student inquiry into the normative and scientific aspects of conservation biology and (2) emphasize the methods for implementing an inquiry-based educational strategy (Prince & Felder, 2007).

This case study addresses the normative basis of environmental law, the scientific basis of implementing environmental law, and how these concepts interact. Implementation of the Clean Water Act (CWA) in Stroubles Creek, Virginia, USA provides the setting for this case study. The goal of this case study is to understand the conceptual basis of the "biological integrity" mandate of the CWA and how this mandate is implemented in scientific surveys of streams and rivers (i.e., bioassessments). Learning objectives are for students to:

- Distinguish between scientific and normative aspects of the CWA's "biological integrity" mandate;
- Understand the role of reference conditions in measuring biological integrity;
- Recognize how biological traits can affect pollution tolerance in streams; and
- Recognize some critical uncertainties in CWA implementation.

First, we present a "teaching case" to be distributed to students prior to class. Second, we present "teaching notes" for instructors to facilitate classroom activities. Third, we report on our use of this case study at Virginia Tech. Although this case study is designed for a class in conservation biology, modifications could make it appropriate
