Biology of Aging Roger B. McDonald, 2019-06-07 Biology of Aging Second Edition presents the biological principles that have led to a new understanding of the causes of aging and describes how these basic principles help one to understand the human experience of biological aging longevity and age related disease Intended for undergraduate biology students it describes how the rate of biological aging is measured explores the mechanisms underlying cellular aging discusses the genetic pathways that affect longevity in various organisms outlines the normal age related changes and the functional decline that occurs in physiological systems over the lifespan and considers the implications of modulating the rate of aging and longevity The book also includes end of chapter discussion questions to help students assess their knowledge of the material Roger McDonald received his Ph D from the University of Southern California and is Professor Emeritus in the Department of Nutrition at the University of California Davis Dr McDonald s research focused on mechanisms of cellular aging and the interaction between nutrition and aging His research addressed two key topics in the field the relationship between dietary restriction and lifespan and the effect of aging on circadian rhythms and hypothalamic regulation You can contact Dr McDonald at rbmcdonald.ucdavis.edu Related Titles Ahmad S I ed Aging Exploring a Complex Phenomenon ISBN 978 1 1381 9697 1 Moody H R J Sasser Gerontology The Basics ISBN 978 1 1387 7582 4 Timiras P S Physiological Basis of Aging and Geriatrics ISBN 978 0 8493 7305 3

**The Biology of Aging** John A. Behnke, 2012-12-06 Egocentricity is characteristically human It is natural for our prime interest to be ourselves and for one of our major concerns to be what affects us personally Aging and death universal and inevitable have always been of compelling concern Mystical explanations were invented when scientific answers were lacking and gross physiology As scientific knowledge developed anatomical processes were explained and the roles of the endocrine glands were revealed Since the sex hormones obviously lose some of their potency with age it was logical to assume that they played the major role in declining general well being The puzzle of aging would now be solved The Ponce de Leon quest would soon be fulfilled Pseudoscientists and quacks rushed in where most scientists feared to tread By the time the glowing promises of perpetual youth through gland transplants and injections had proved illusory serious study of the aging process had been set back for years The field had lost respect ability and most capable scientists shunned it Those who did continue to seek answers to its tough questions deserve special recognition

**Biology of Aging** Alvaro Macieira-Coelho, 2002-10-21 The survival of the human species has improved significantly in modern times During the last century the mean survival of human populations in developed countries has increased more than during the preceding 5000 years This improvement in survival was accompanied by an increase in the number of active years In other words the increase in mean life span was accompanied by an increase in health span This is now accentuated by progress in medicine reducing the impact of physiologic events such as menopause and of pathological processes such as atherosclerosis Up to now research on aging whether theoretical or experimental has not contributed to improvement in

human survival Actually there is a striking contrast between these significant modifications in survival and the present knowledge of the mechanisms of human aging Revealed by this state of affairs are the profound disagreements between gerontologists in regard to the way of looking at the aging process The definition of aging itself is difficult to begin with because of the variability of how it occurs in different organisms

**Biology of Aging** Robert Arking,2006-02-02 Robert Arking s *Biology of Aging* is an introductory text to the biology of aging which gives advanced undergraduate and graduate students a thorough review of the entire field The mass of data related to aging is summarized into fifteen focused chapters each dealing with some particular aspect of the problem His prior two editions have also served admirably as a reference text for clinicians and scientists This new edition captures the extraordinary recent advances in our knowledge of the ultimate and proximal mechanisms underlying the phenomenon of aging

**Handbook of the Biology of Aging** Edward J. Masoro,Steven N. Austad,2011-04-28 The *Handbook of the Biology of Aging* Sixth Edition provides a comprehensive overview of the latest research findings in the biology of aging Intended as a summary for researchers it is also adopted as a high level textbook for graduate and upper level undergraduate courses The Sixth Edition is 20% larger than the Fifth Edition with 21 chapters summarizing the latest findings in research on the biology of aging The content of the work is virtually 100% new Though a selected few topics are similar to the Fifth Edition these chapters are authored by new contributors with new information The majority of the chapters are completely new in both content and authorship The Sixth Edition places greater emphasis and coverage on competing and complementary theories of aging broadening the discussion of conceptual issues Greater coverage of techniques used to study biological issues of aging include computer modeling gene profiling and demographic analyses Coverage of research on *Drosophila* is expanded from one chapter to four New chapters on mammalian models discuss aging in relation to skeletal muscles body fat and carbohydrate metabolism growth hormone and the human female reproductive system Additional new chapters summarize exciting research on stem cells and cancer dietary restriction and whether age related diseases are an integral part of aging The *Handbook of the Biology of Aging* Sixth Edition is part of the *Handbooks on Aging* series including *Handbook of the Psychology of Aging* and *Handbook of Aging and the Social Sciences* also in their 6th editions

**Handbook of the Biology of Aging** Edward L. Schneider,John W. Rowe,2013-10-22 *Handbook of The Biology of Aging* Third Edition provides a general overview to a wide scientific audience of some of the most important topics in biomedical gerontology The book discusses methodologies for biological aging studies and on animal models Protein modifications with aging special senses circadian rhythms and the adrenocortical axis are tacked in the book as well Gerontologists psychologists health care professionals and graduate students will find the book useful

**Evolutionary Biology of**

**Aging** Michael R. Rose,1994-10-27 This unique book looks at the biology of aging from a fundamentally new perspective one based on evolutionary theory rather than traditional concepts which emphasize molecular and cellular processes The basis for this approach lies in the fact that natural selection as a powerful determining force tends to decline in importance with age Many of the characteristics we associate with aging the author argues are more the result of this decline than any mechanical imperative contained within organic structures This theory in turn yields the most fruitful avenues for seeking answers to the problem of aging and should be recognized as the intellectual core of gerontology and the foundation for future research The author ably surveys the vast literature on aging presenting mathematical experimental and comparative findings to illustrate and support the central thesis The result is the first complete synthesis of this vital field Evolutionary biologists gerontologists and all those concerned with the science of aging will find it a stimulating strongly argued account

Warner,1987 **Biochemistry and Cell Biology of Ageing: Part I Biomedical Science** J. Robin Harris,Viktor I. Korolchuk,2019-02-18 This new volume in the Subcellular Biochemistry series will focus on the biochemistry and cellular biology of aging processes in human cells The chapters will be written by experts in their respective fields and will focus on a number of the current key areas of research in subcellular aging research Main topics for discussion are mitochondrial aging protein homeostasis and aging and the genetic processes that are involved in aging There will also be chapters that are dedicated to the study of the roles of a variety of vitamins and minerals on aging and a number of other external factors microbiological ROS inflammation nutrition This book will provide the reader with a state of the art overview of the subcellular aging field This book will be published in cooperation with a second volume that will discuss the translation of the cell biology of aging to a more clinical setting and it is hoped that the combination of these two volumes will bring a deeper understanding of the links between the cell and the body during aging

**Evolutionary Biology of Aging** Michael Robertson Rose,2023 This study examines a fundamental unsolved problem of biology why do we grow old The author proposes an evolutionary theory of senescence which he elaborates with evidence from cell biology physiology and gerontology

Molecular Biology of Aging Avril D. Woodhead,Anthony D. Blackett,Alexander Hollaender,1985-10-31 It is delightful but humbling to find my face at the start of these Proceedings there are innumerable other faces which could equally well stand there from among the band who have fore gathered at every gerontology conference since the subject was launched in its present form but I deeply appreciate being there Gerontology did not grow by accident Its present standing is the fruit of careful planning undertaken by European and American scientists back in the 1950 s In those days it was still a fringe science and the conspirators had much the standing of the 1920 s Interplanetary Society The United States itself is the offspring of conspiracy for when the results of conspiracy are beneficent the conspirators become Founding Fathers This has been the case with gerontology The present meeting is especially gratifying because the papers have been recitals of normal hard science investigation We had to get through the rigors of a long period of semantic argument and a long period of one shot general theories before this kind of meeting normal in all other research fields could take place It was also necessary to breed in the menagerie a generation of excellent investigators aware of the theoretical background but unintimidated by it who share our conviction that human aging is comprehensible and probably controllable and who go into the laboratory to attack specifics
