Biomedical Devices And Their Applications:

Biomedical Devices and Their Applications D. Shi, 2013-11-11 Biomedical devices that contact with blood or tissue represent a wide range of products Depending on their potential harm to a body medical devices are categorized according to the degree so their safety can be assured All biomaterials are by definition designed to contact with a body for a certain period of time The nature of the body contact as well as the duration a material contacts with the body may initiate unwanted biological In comparison with invasive devices Oike catheters and medical responses implants contact directly with tissue or with the circulating blood non invasive devices like wound dressings and contact lenses contact with the skin the sclera and the mucosa or with open wounds have a lesser risk of hurting a patient When blood contacts with a foreign material plasma proteins become absorbed to the surface within a few seconds The reactions that follow the so called intrinsic pathway lead to the formation of fibrin and activation of platelets and white blood cells result in blood clot formation Biomedical Devices and Their Application ,2004 5
