primarily amateur biologist with an interest in insects and for all those who desire to understand the science of entomology. The technical words related to the various disciplines of entomology such as morphology, anatomy, physiology, systematics, ecology, pest management, and general entomology have been included in this Dictionary and where ever possible the technical meaning of these words have been clarified with the help of labeled diagram. Efforts have been made to define the entomological terms in a simple manner in order to make them understandable by the students of entomology and all those who are not the experts of entomology rather they encounter such technical words while dealing with the related literature and fail to find their meaning in general English dictionaries. The students of biology and agriculture sciences in the beginning face lot of problems in understanding the subject because of poor knowledge of such technical words. The individual technical word having different applications have been incorporated in a convincing manner. Therefore this dictionary will serve as a ready reckoner for all those who wish to understand the science of entomology. This dictionary will also be useful to understand and solve the objective type questions by all those who are to appear in some competitive examinations either for admission in universities or to seek job in the field of entomology and plant protection. It is believed that this dictionary will be useful for the teachers, students, scientists, technologists, extension specialists and all those who deal insects in one way or the other.

**A Dictionary for Entomology** Tim Williams, 2009-10-23. With over 13 600 entries this dictionary is the most comprehensive reference work of its kind available today. It fulfills the need for an entomology work that combines the concise presentation of a dictionary, a brief etymology for each term and the inclusion of the general terms one would meet during an entomology course. Entomology is not studied in isolation therefore the more common terms from the fields of Anatomy, Animal Behavior, Ecology, Embryology, Endocrinology, Evolution, Genetics, Physiology, Taxonomy and Zoogeography as well as many terms covering sizes, shapes, colors, forms and textures have been included. There is comprehensive taxonomic coverage of every family and many species that are of particular interest. Appendices give a synopsis of the subphylum Hexapoda and an alphabetical list of the families. This dictionary is the standard reference and will be invaluable to those with an interest in entomology. For more details see [www.trwbooks.com](http://www.trwbooks.com).

Ericson, Department Us Department of Agriculture, 2004-10-01 Translating scientific papers from foreign languages into English requires more than finding English equivalents in a dictionary Sometimes the foreign words do not appear in the foreign language dictionary or the equivalents cited for them are unsuitable At other times the choice of equivalents is so wide that proper selection of the preferred English term is difficult Dictionaries seldom make shades of meaning clear they

can usually be gleaned only from the context of the paper itself from illustrations accompanying it from a knowledge of the insect concerned or by consulting European entomologists familiar with the common words in technical use In older papers on entomology European writers used Latin technical terms in describing the parts of an insect's body as American entomologists still do But in the 1930s many European writers began to replace such technical terms by words from the common speech Instead of the Latin and hence universal abdomen some German writers first adopted Bauch for the third section of an insect body Since this word means abdomen or venter in man it was not precise enough to designate the abdomen in insects Therefore Hinterleib hinder part of the body is now more generally used for abdomen whereas Bauch is employed to mean the venter or sternum of the abdomen in insects in more recent literature These common words tend to be used loosely and inconsistently Of two Russian collaborators in papers on grasshoppers for instance one uses a different Russian word for the sternum and the thorax but the other uses the same Russian word for both Many of these terms are not the ones preferred by European specialists in entomology Many were incorrectly used by amateurs or by entomologists writing in a language other than their own Hence the terms appearing in this Glossary are not necessarily the ones used by the best writers but the equivalents given for them were found to be those best suited for the purpose of a given translation Miss Ericson had completed the manuscript for this glossary but had no opportunity to review the proofs at the time of her death on October 9 1961
