Capsaicin - Sensitive Neural Afferentation and the Gastrointestinal Tract Gyula Mozsik, Koji Takeuchi, Omar Abdel-Salam, 2014-07-16 The capsaicin a component of paprika has been used in the culinary practice of every day nutritional practice This agent is known to cause a variety of actions in the body through activating capsaicin sensitive afferent neurons A recently launched book entitled *Capsaicin Sensitive Neural Afferentation and the Gastrointestinal Tract* from Bench to Bedside is attractive for several reasons First Prof Mozsik a chief editor of this book is known internationally as an expert in capsaicin pharmacology Since he has worked for many years as a head of internal medicine taking care of patients with various GI diseases he is able to make a correct interpretation of various findings obtained in basic researches to clinical events Second although there are many articles about capsaicin they mostly deal with basic research and finding but do not include much about clinical finding Third this book encompassed review articles written by internationally accepted scientists leading the field of capsaicin research who highlighted the current state of knowledge on pharmacology physiology and clinical pathophysiology of capsaicin sensitive afferent neurons and discussed directions for future research Overall this book is for people who are interested in the capsaicin action in body

Capsaicin-Sensitive Afferent Nerves in Gastric Mucosal Damage and Protection Gyula Mózsik, Abdel-Salam Mozsik, J. Szolcsanyi, O. M. Abdel-Salam, 1997 [Sensory Nerves and Neuropeptides in Gastroenterology](#) Marcello Costa, Calgero Surrenti, Sergio Gorini, Carlo Alberto Maggi, Alberto Meli, 2013-11-21 In the past 15 years much evidence has accumulated which indicates the paramount importance of sensory nerves in regulating functions of the gastrointestinal tract In parallel the attention of researchers in this field has been increasingly attracted to the role played by neuropeptides in the normal and diseased gut Basic research on the peculiar properties of capsaicin the pungent ingredient from plants of the genus *Capsicum* has allowed the gap between these two areas of research to be bridged Since then the study of gut afferents and neuropeptides has become more and more interconnected and recognized as a major avenue to understanding the pathophysiology of various human diseases It is widely recognized that a certain subset of primary afferents synthesize store and release neuropeptides such as tachykinins and calcitonin gene related peptide from their central and peripheral endings the latter being widely distributed in the alimentary canal and related organs liver pancreas The First International Meeting on Sensory Nerves and Neuropeptides in Gastroenterology held in Florence from December 4-5 1989 sponsored and organized by Fondazione Internazionale Menarini aimed to focus the current status of research in this field The contributions presented at the meeting and in this book delineate a suggestive scenario in which sensory nerves of the gut and the multiple messages they carry through the release of neuropeptides are to be considered as a major target for the development of new drugs potentially useful in a number of diseases of the gastrointestinal tract

Neurogenic Inflammation in Health and Disease, 2008-11-11 Morphological and functional studies revealed a complex system of primary sensory neurons that parallels the autonomic nervous system

not only in its extent but probably also in its significance. Neuropeptides released from activated nociceptive afferent nerves play a pivotal role in inflammatory reactions and pain significantly modulate cardiac, vascular, respiratory, gastrointestinal, and immune functions and influence the protective, restorative, and trophic functions of somatic and visceral tissues. Several chapters of the book deal with the therapeutic potential of a new class of putative pain-relieving agents acting through TRPV1, the capsaicin vanilloid receptor, a specific ion channel that transmits pain. Neurogenic inflammation in historical perspective, Cardiac protection by nociceptive afferents, Molecular mechanisms of nociception, Sensory mechanisms in migraine pathophysiology, Vagal signaling of visceral inflammation, Neurogenic mechanisms in arthritis, Therapeutic implications of vanilloid-type compounds.

Cumulated Index Medicus, 1991. **Physiology of the Gastrointestinal Tract** Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10. FROM THE PREFACE: The original purpose of the First Edition of *Physiology of the Gastrointestinal Tract* to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition. The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition. The first section now titled *Basic Cell Physiology and Growth of the GI Tract* contains numerous new chapters on topics such as transcriptional regulation, signaling networks in development, apoptosis, and mechanisms in malignancies. Most of the chapters in this section were edited by Juanita L. Merchant. Section II has been renamed *Neural Gastroenterology and Motility* and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology, neural regulation, stress, and the regulation of food intake. Almost all of the chapters were recruited and edited by Jackie D. Wood. The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E. Barrett. The fourth section on the *Physiology of Secretion* consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion. The last section on *Digestion and Absorption* contains new chapters on the intestinal barrier, protein sorting, and ion channels along with those focusing on the uptake of specific nutrients. These chapters were recruited and edited by Hamid M. Said and Faye K. Ghishan. Collected in one set, the most current and comprehensive coverage of gastrointestinal physiology. Information presented in a style that is both readable and understandable. Valuable to the specialized researcher, the clinical gastroenterologist, the teacher, and the student. Features an entirely new section on Immunology and Inflammation. Each section edited by the preeminent scientist in the field.
