how the story of the port is the story of modern globalized America itself By the mid nineteenth century Americans had identified the West Coast as the republic s destiny a gateway to the riches of the Pacific In a narrative spanning decades and stretching to Washington DC the Pacific Northwest Civil War Richmond Southwest deserts and even overseas to Europe Hawaii and Asia Tejani demonstrates how San Pedro came to be seen as all important to the nation s future It was not virgin land but dominated by powerful Mexican estates that would not be dislodged easily Yet American scientists including the great surveyor George Davidson imperialist politicians such as Jefferson Davis and William Gwin and hopeful land speculators among them the future Union Army general Edward Ord would wrest control of the estuary and set the scene for the violence inequality and engineering marvels to come San Pedro was no place for a harbor Tejani reveals The port was carved in defiance of nature using new engineering techniques and massive mechanical dredgers Business titans such as Collis Huntington and Edward H Harriman brought their money and corporate influence to the task But they were outmatched by government reformers laying the foundations for the port for the modern city of Los Angeles and for our globalized world Interweaving the natural history of San Pedro into this all too human history Tejani vividly describes how a wild coast was made into the engine of American power A story of imperial dreams and personal ambition *A Machine to Move Ocean and Earth* is necessary reading for anyone who seeks to understand what the United States was what it is now and what it will be

Invasion Biology and Ecological Theory Herbert H. T. Prins, Iain J. Gordon, 2014-01-23 Many conservationists argue that invasive species form one of the most important threats to ecosystems the world over often spreading quickly through their new environments and jeopardising the conservation of native species As such it is important that reliable predictions can be made regarding the effects of new species on particular habitats This book provides a critical appraisal of ecosystem theory using case studies of biological invasions in Australasia Each chapter is built around a set of eleven central hypotheses from community ecology which were mainly developed in North American or European contexts The authors examine the hypotheses in the light of evidence from their particular species testing their power in explaining the success or failure of invasion and accepting or rejecting each hypothesis as appropriate The conclusions have far reaching consequences for the utility of community ecology suggesting a rejection of its predictive powers and a positive reappraisal of natural history

Conceptual Revolutions Paul Thagard,1993 In this path breaking work Paul Thagard draws on the history and philosophy of science cognitive psychology and the field of artificial intelligence to develop a theory of conceptual change capable of accounting for all major scientific revolutions The history of science contains dramatic episodes of revolutionary change in which whole systems of concepts have been replaced by new systems Thagard provides a new and comprehensive perspective on the transformation of scientific conceptual systems Thagard examines the Copernican and the Darwinian revolutions and the emergence of Newton s mechanics Lavoisier s oxygen theory Einstein s theory of relativity quantum theory and the geological theory of plate tectonics He discusses the psychological mechanisms by which new concepts and links between them are formed and advances a computational theory of explanatory coherence to show how new theories can be judged to be superior to previous ones
