**The Future of Social Work** Jason W. Duffield, 2021

The Covid 19 pandemic of 2020 was a transformative event that changed the way many of us work with many people using online platforms to work remotely often for the first time The field of social work was no exception The problem with this online shift lies in the nature of the social work profession human connection empathy and face to face relationships are an integral part of how social workers perform their jobs This study aimed to explore how social workers adapted to the online environment what worked well for them and what could be improved The research used an approach that was a blend of traditional design Co Design and Appreciative Inquiry to work with faculty staff current students and alumni of The Ohio State University College of Social Work regarding their response to the pandemic The study consisted of a survey interviews and interactive online workshops using Zoom a videoconferencing platform and Miro a collaborative platform and online whiteboard These activities were then summarized in an interactive presentation that provided an additional opportunity for collaboration with social work stakeholders The output of this study includes the design of a prototype for a model that can assist social workers who are involved in micro clinical work when working with clients online There is an associated matrix that includes the types of barriers social workers are likely to encounter when working with clients online things such as a lack of internet or a chaotic home environment The matrix also includes a sampling of means to address these barriers both from real world examples that were relayed to me by social workers and new ideas that were generated during an online workshop with social work stakeholders It is my hope that social workers can use both the online treatment model and the barriers matrix as resources to assist with their online interactions and to continue to develop and evolve both items through their practice While these resources are focused on micro social work practice some of the findings in this document may be of interest to anyone who is participating in an online work environment

Quasi-Experimental Research Designs Bruce A. Thyer, 2012-02-02 It is usually the case that ethical and pragmatic considerations preclude the use of randomly assigning social work clients to experimental and comparative treatment conditions In such instances the practicality of employing a quasi experimental method becomes an excellent alternative Quasi experimental research designs allow researchers to compare groups and the use of increasingly sophisticated programs provides greater statistical control for what has become the most widely employed research approach used to evaluate the outcomes of social work programs and policies This pocket

guide describes the logic design and conduct of the range of such designs encompassing pre experiments quasi experiments making use of a control or comparison group and time series designs An introductory chapter describes the valuable role these types of studies have played in social work from the 1930s to the present Subsequent chapters delve into each design type s major features the kinds of questions it is capable of answering and its strengths and limitations By linking the theoretical discussion of quasi experimental designs with actual applications in social work literature the usefulness and vitality of these research methods comes alive for readers While this book can be utilized as a manual it will also have great value for practitioners seeking a greater conceptual understanding of quasi experimental studies in social work literature Human service professionals planning to undertake a program evaluation of their agency s services will find this book helpful in understanding the steps and actions needed to adopt a quasi experimental strategy
