Charles S. Roy ... and Robert W. Shufeldt ...** Dr. Robert Wilson Shufeldt, Hans Gadow, Richard Lydekker, 1893 *A Dictionary of Birds, by Alfred Newton, Assisted by Hans Gadow, with Contributions from Richard Lydekker, ... Charles S. Roy, ... and Robert W. Schufeldt, ...* Charles Smart Roy, 1893 *The Eponym Dictionary of Birds* Bo Beolens, Michael Watkins, Michael Grayson, 2014-08-28 A comprehensive dictionary listing all the people whose names are commemorated in the English and scientific names of birds Birdwatchers often come across bird names that include a person's name either in the vernacular English name or latinised in the scientific nomenclature Such names are properly called eponyms and few people will not have been curious as to who some of these people were or are Names such as Darwin Wallace Audubon Gould and Gilbert White are well known to most people Keener birders will have yearned to see Pallas's Warbler Hume's Owl Swainson's Thrush Steller's Eider or Br n nich's Guillemot But few people today

will have even heard of Albertina's Myna, Barraband's Parrot, Guerin's Helmetcrest or Savigny's Eagle Owl. This extraordinary new work lists more than 4 000 eponymous names covering 10 000 genera, species and subspecies of birds. Every taxon with an eponymous vernacular or scientific name, whether in current usage or not, is listed, followed by a concise biography of the person concerned. These entries vary in length from a few lines to several paragraphs, depending on the availability of information or the importance of the individual's legacy. The text is punctuated with intriguing or little-known facts unearthed in the course of the authors' extensive research. Ornithologists will find this an invaluable reference, especially to sort out birds named after people with identical surnames or in situations where only a person's forenames are used. But all birders will find much of interest in this fascinating dictionary, an ebook to dip into time and time again whenever their curiosity is aroused.

A Dictionary of Birds Volume 2 Alfred Newton, 2013-09. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book without typos from the publisher. Not indexed. Not illustrated. 1899 edition. Excerpt or library would doubt for a moment whether any bird shown to him were a Kestrel or not, and the late Mr Gurney believed Ibis 1881 p 277 that the aggregated 1110 of species placed by Dr Sharpe under the generic designation of *Cerchneis* which should properly be *Tinnunculws* included three natural groups sufficiently distinct to be treated as at least separate subgenera bearing the name of *Dissodectes*, *Timm*, *Iwulus* and *Erythropus*. Of these we may say that the first and last are not at all Kestrels but are perhaps rather related to *Hyphantornis*. This is Mr Gurney's latest view as shown in 1884. 1 is of the Diurnal Birds of Prey pp 96-100, recognized 15 species of *Tinnunculus* with 5 subspecies. 1 Other English names are Windhover and Staniel, of which Stannell is a corruption and often by mistaken etymology written Standgale. cf 51491311 T7 Etymol Soc 1888 90 p 21. The ordinary Kestrel of Europe, *T. alaudarius*, is by far the commonest Bird of Prey in the British Islands and is too common and well known to need any description. It is almost entirely a summer migrant, coming from the south in early spring and departing in autumn, though examples which are nearly always found to be birds of the year occasionally occur in winter, some arriving on the eastern coast in autumn. It is most often observed while practising its habit of hanging in the air for a minute or two in the same spot by rapid beats of its wings, as with head pointing to windward and expanded tail, it looks out for prey consisting chiefly of mice, but it will at times take a small bird, and the remains of frogs, insects, and even earth worms have been found in its crop.
