

11 Editing Patches

The MS2 comes with 24 pre-defined patches that have been programmed at the factory. However, the MS2 offers many more possibilities for creating effects in innovative ways. To discover these possibilities, first re-programmed that you try out the editing functions, which lets you create your own patches. The mode in which patches can be edited is called the Edit mode.

To switch from normal Play mode to Edit mode, briefly press the EDIT key. Do not keep the EDIT key depressed, because if the key is held for 1 second, the Bank Hold mode will be activated.

Immediately after switching from the Play mode to the Edit mode, the parameter cursor flashes at the highest position (COMP module), regardless of which patch was selected. The COMP module setting of the current patch is shown on the display.

While Edit mode is active, each push of the EDIT key causes the parameter cursor to move one position down. The flashing position shows which module is selected for editing. The relation between parameter cursor LEDs and modules is as shown below:

- 1st parameter cursor LED: COMP module setting
- 2nd parameter cursor LED: EQ module setting
- 3rd parameter cursor LED: EQ module setting
- 4th parameter cursor LED: ZNR and AMP module setting

- 7th parameter cursor LED: DLY/REV module setting
- 8th parameter cursor LED: DLY/REV module setting
