Whole Numbers

Addition and Subtraction

Addition is indicated by $+$. Subtraction is indicated by $-$. Commutative is a special mathematical name we give to certain operations. It means that we can do the operation in any order. Addition is commutative because we know that

$$2 + 4 \text{ means the same thing as } 4 + 2$$

Subtraction is not commutative since

$$21 - 6 \text{ is not the same as } 6 - 21$$

For this reason addition can be done in any order. Generally we calculate from left to right across the page. We can sometimes rearrange the order of a sum involving both additions and subtractions but when we do this we must remember to keep the number with the sign immediately preceding it. For example

$$3 + 5 + 3 + 4 + 7 + 3 = 3 + 3 + 3 + 4 + 5 + 7$$

$$6 + 7 - 10 + 2 - 1 - 2 = 6 + 7 + 2 - 10 - 1 - 2$$

Multiplication and Division

Multiplication is indicated by \times or \cdot . Sometimes, as long as there will be no confusion we use juxtaposition to indicate multiplication, particular when we use letters to represent quantities. For example $3a$ means $3 \times a$ and xy means $x \times y$. Multiplication is a commutative operation i.e. we can reverse the order e.g. $3 \times 4 = 4 \times 3$.

Division is indicated by the symbols \div , $/$ or --- . Division is not commutative since $4 \div 2 \neq 2 \div 4$. Multiplication and division should be done from left to right across the page, although you can rearrange the order of an expression involving only multiplications. For example

$$3 \times 4 \times 5 = 5 \times 4 \times 3$$

$$ab3a = 3aab$$
