Basic Global Relative Invariants For Homogeneous Linear Differential Equations:

Basic Global Relative Invariants for Homogeneous Linear Differential Equations Roger Chalkley, 2002 Given any fixed integer $m \geq 3$ the author presents simple formulas for $m - 2$ algebraically independent polynomials over $\mathbb{Q}$ having the remarkable property with respect to transformations of homogeneous linear differential equations of order m that each polynomial is both a semi invariant of the first kind with respect to changes of the dependent variable and a semi invariant of the second kind with respect to changes of the independent variable These relative invariants are suitable for global studies in several different contexts and do not require Laguerre Forsyth reductions for their evaluation In contrast all of the general formulas for basic relative invariants that have been proposed by other researchers during the last 113 years are merely local ones that are either much too complicated or require a Laguerre Forsyth reduction for each evaluation

Basic Global Relative Invariants for Nonlinear Differential Equations Roger Chalkley, 2007 The problem of deducing the basic relative invariants possessed by monic homogeneous linear differential equations of order m was initiated in 1879 with Edmund Laguerre's success for the special case $m = 3$ It was solved in number 744 of the *Memoirs of the AMS* March 2002 by a procedure that explicitly constructs for any $m \geq 3$ each of the $m - 2$ basic relative invariants During that 123 year time span only a few results were published about the basic relative invariants for other classes of ordinary differential equations With respect to any fixed integer $m \geq 1$ the author begins by explicitly specifying the basic relative invariants for the class $\mathcal{C}_m$ that contains equations like $Q_m = 0$ in which Q_m is a quadratic form in $y, z, \dots, y^m, z^m$ having meromorphic coefficients written symmetrically and the coefficient of $y^m z^2$ is 1 Then in terms of any fixed positive integers m and n the author explicitly specifies the basic relative invariants for the class $\mathcal{C}_{m,n}$ that contains equations like $H_{m,n} = 0$ in which $H_{m,n}$ is an n th degree form in $y, z, \dots, y^m, z^m$ having meromorphic coefficients written symmetrically and the coefficient of $y^m z^n$ is 1 These results enable the author to obtain the basic relative invariants for additional classes of ordinary differential equations

From Representation Theory to Homotopy Groups Donald M. Davis, 2002 A formula for the odd primary v_1 periodic homotopy groups of a finite H space in terms of its K theory and Adams operations has been obtained by Bousfield This work applies this theorem to give explicit determinations of the v_1 periodic homotopy groups of $E_8/5$ and $E_8/3$ thus completing the determination of all odd primary v_1 periodic homotopy groups of all compact simple Lie groups a project suggested by Mimura in 1989

Exponentially Small Splitting of Invariant Manifolds of Parabolic Points, **Classification and Probabilistic**

Representation of the Positive Solutions of a Semilinear Elliptic Equation Benoît Mselati, 2004 Concerned with the nonnegative solutions of $\Delta u = u^2$ in a bounded and smooth domain in $\mathbb{R}^d$ this title intends to prove that they are uniquely determined by their fine trace on the boundary as defined in DK98a answering a major open question of Dy02

The \$AB\$ Program in Geometric Analysis: Sharp Sobolev Inequalities and Related Problems Olivier Druet, Emmanuel Hebey, 2002 Function theory and Sobolev inequalities have been the target of investigation for many years Sharp constants in these inequalities constitute a critical tool in geometric analysis The AB programme is concerned with sharp Sobolev inequalities on compact Riemannian manifolds This text summarizes the results of contemporary research and gives an up to date report on the field On the Splitting of Invariant Manifolds in Multidimensional Near-Integrable Hamiltonian Systems Pierre Lochak, J.-P. Marco, D. Sauzin, 2003 Presents the problem of the splitting of invariant manifolds in multidimensional Hamiltonian systems stressing the canonical features of the problem This book offers introduction of a canonically invariant scheme for the computation of the splitting matrix Interpolation of Weighted Banach Lattices/A Characterization of Relatively Decomposable Banach Lattices Michael Cwikel, Per G. Nilsson, Gideon Schechtman, 2003 Includes a paper that provides necessary and sufficient conditions on a couple of Banach lattices of measurable functions X_0, X_1 which ensure that for all weight functions w_0 and w_1 the couple of weighted lattices X_{w_0, w_1} is a Calderon Mityagin couple **Abstract Band Method via Factorization, Positive and Band Extensions of Multivariable Almost Periodic Matrix Functions, and Spectral Estimation** L. Rodman, Ilya M. Spitkovskii, Hugo Jan Woerdeman, 2002 In this work versions of an abstract scheme are developed which are designed to provide a framework for solving a variety of extension problems The abstract scheme is commonly known as the band method The main feature of the new versions is that they express directly the conditions for existence of positive band extensions in terms of abstract factorizations with certain additional properties The results prove amongst other things that the band extension is continuous in an appropriate sense **The Connective K-Theory of Finite Groups** Robert Ray Bruner, John Patrick Campbell Greenlees, 2003 Includes a paper that deals the connective K homology and cohomology of finite groups G This title uses the methods of algebraic geometry to study the ring ku DEGREES BG where ku denotes connective complex K theory It describes the variety in terms of the category of abelian p subgroups of G for primes p dividing the group Quasianalytic Monogenic Solutions of a Cohomological Equation Stefano Marmi, D. Sauzin, 2003 We prove that the solutions of a cohomological equation of complex dimension one and in the analytic category have a monogenic dependence on the parameter This cohomological equation is the standard linearized conjugacy equation for germs of holomorphic maps in a neighborhood of a fixed point Basic Global Invariants for Homogeneous Linear Differential Equations Roger Chalkley, 2002 **Global Properties of Linear Ordinary Differential Equations** Frantisek Neuman, 1991 This volume presents an authoritative unified overview of the methods and results concerning the global properties of linear differential equations of order $n \geq 2$ It does not however seek

to be comprehensive Rather it contains a selection of results which richly illustrate the unified approach presented By making use of recent methods and results from many different areas of mathematics and by introducing several original methods global solutions of problems previously studied only locally are given The structure of global transformations is described algebraically and a new geometrical approach is introduced which leads to global canonical forms suitable for Cartan s moving frame of reference method The theory discussed also provides effective tools for solving some open problems especially relating to the distribution of zeros of solutions In addition the theory of functional equations plays an important role in studying the asymptotic behaviour of solutions Applications to differential geometry and functional equations are also described The volume is largely self contained This book is for mathematicians computer scientists physicists chemists engineers and others whose work involves the use of linear differential equations *Invariants of Systems of Linear Differential Equations* Ernest Julius Wilczynski,1901 **Forthcoming Books** Rose Arny,2002
 Mathematical Reviews ,2003 *American Book Publishing Record* ,2002 **The Invariants of Linear Differential Expressions** Frank Irwin,1908 *Reviews in Global Analysis*, 1980-86 as Printed in *Mathematical Reviews* ,1988
