**Basic Hypergeometric Series and Applications** Nathan Jacob Fine,1988 The theory of partitions founded by Euler has led in a natural way to the idea of basic hypergeometric series also known as Eulerian series These series were first studied systematically by Heine but many early results are attributed to Euler Gauss and Jacobi This book provides a simple approach to basic hypergeometric series *Basic Hypergeometric Series & Applications* Nathan Jacob Fine,2014-06-06 The theory of partitions founded by Euler has led in a natural way to the idea of basic hypergeometric series also known as Eulerian series These series were first studied systematically by Heine but many early results are attributed to Euler Gauss and Jacobi This book provides a simple approach to basic hypergeometric series *Q-hypergeometric Functions and Applications* Harold Exton,1983 Good No Highlights No Markup all pages are intact Slight Shelfwear may have the corners slightly dented may have slight color changes slightly damaged spine **Basic Hypergeometric Series** George Gasper,Mizan Rahman,2011-02-25 Significant revision of classic reference in special functions [Basic Almost-Poised Hypergeometric Series](#) Wenchang Chu,1998 Presents a systematic treatment for the evaluation of basic almost poised series Some 200 identities are covered among which most are believed to be new Their connections with the q Clausen formulae as well as Rogers Ramanujan identities are sketched No index Annotation copyrighted by Book News Inc Portland OR

**Theory and Applications of Special Functions for Scientists and Engineers** Xiao-Jun Yang,2022-01-14 This book provides the knowledge of the newly established supertrigonometric and superhyperbolic functions with the special functions such as Mittag Leffler Wiman Prabhakar Miller Ross Rabotnov Lorenzo Hartley Sonine Wright and Kohlrausch Williams Watts functions Gauss hypergeometric series and Clausen hypergeometric series The special functions can be considered to represent a great many of the real world phenomena in mathematical physics engineering and other applied sciences The audience benefits of new and original information and references in the areas of the special functions applied to model the complex problems with the power law behaviors The results are important and interesting for scientists and engineers to represent the complex phenomena arising in applied sciences therefore graduate students and researchers in mathematics physics and engineering might find this book appealing [Applications and  \$q\$ -Extensions of Hypergeometric Functions](#) Howard S. AMS Special Session on Hypergeometric Functions  $q$  series and Generalizations at the 2023 AMS Spring Eastern Virtual Sectional Meeting April 1-2, 2023. This book provides a sampling of recent research on applications of classical hypergeometric and related special functions to problems in mathematical physics and elsewhere and on  $q$  extensions of hypergeometric functions and other topics in  $q$  calculus. The problems in mathematical physics include the explicit integration of the stationary Schrödinger equation with many potentials and the computation of the gravitational potential of an ellipsoidal mass in terms of elliptic integrals. The  $q$  calculus topics include a study of Ramanujan's  $q$ -continued fractions, new  $q$ -identities and important limits of basic hypergeometric orthogonal polynomials. All research articles come with extensive bibliographies and can serve as entry points to the current literature.

**Physics And Combinatorics, Procs Of Nagoya 1999 Intl Wkshp** Anatol N Kirillov, Akihiro Tsuchiya, Hiroshi Umemura, 2001-04-02. This volume contains research and review papers on different branches of mathematics and mathematical physics written by the leading specialists. Among the contributed papers are articles on: i) multiple basic hypergeometric functions with applications to the number theory; ii) birational representations of affine Weyl groups with applications to discrete integrable systems; iii) algebraic geometry and Painlevé VI; and iv) combinatorics of Kostka-Foulkes polynomials.

**Theory and Applications of Special Functions** Mourad E. H. Ismail, Erik Koelink, 2006-03-30. This volume Theory and Applications of Special Functions is dedicated to Mizan Rahman in honoring him for the many important contributions to the theory of special functions that he has made over the years and still continues to make. Some of the papers were presented at a special session of the American Mathematical Society Annual Meeting in Baltimore, Maryland in January 2003 organized by Mourad Ismail. Mizan Rahman's contributions are not only contained in his own papers but also indirectly in other papers for which he supplied useful and often essential information. We refer to the paper on his mathematics in this volume for more information. This paper contains some personal recollections and tries to describe Mizan Rahman's literary writings in his mother tongue Bengali. An even more personal paper on Mizan Rahman is the letter by his sons whom we thank for allowing us to reproduce it in this book. The theory of special functions is very much an application-driven field of mathematics. This is a very old field dating back to the 18th century when physicists and mathematicians were looking for solutions of the fundamental differential equations of mathematical physics. Since then the field has grown enormously and this book reflects only part of the known applications.

**Perspectives in Representation Theory** Pavel Etingof, Mikhail Khovanov, Alistair Savage, 2014-03-11. This volume contains the proceedings of the conference Perspectives in Representation Theory held from May 12-17, 2012 at Yale University in honor of Igor Frenkel's 60th birthday. The aim of the conference was to present current progress on the following interrelated topics: vertex operator algebras and chiral algebras, conformal field theory, the geometric Langlands program, affine Lie algebras, Kac-Moody algebras, quantum groups, crystal bases and canonical bases, quantum cohomology and K-theory, geometric representation theory, categorification, higher-dimensional Kac-Moody theory, integrable systems, quiver varieties.
