Rachel Smith, John Davidson

African Wild Dog:

The African Wild Dog Scott Creel, Nancy Marusha Creel, 2002-06-09 This book is based on a six year study of African wild dogs *Lycaon pictus* in Tanzania's Selous Game Reserve the largest protected area in Africa and one of the least studied

African Wild Dogs Rita Terry, 2016-08-28 African Wild Dogs Amazing Photos Fun Facts Book About African Wild Dogs The African wild dog is a member of the canine family which makes it a relative of domestic dogs or the ones that we keep as pets Also known as Cape hunting dog the scientific name of the African wild dog is *Lycaon pictus* which translates to painted dog If your parents let you watch the movie Underworld you probably know of the Lycans a breed of werewolves While the existence of werewolves is still debatable wild dog like animals do exist And the African wild dog is just one of many wilder relatives of man's best friend

African Wild Dogs For Kids Rachel Smith, John Davidson, 2015-11-28 Table of Contents Introduction What is an African wild dog How do African wild dogs act Where did African wild dogs come from Conclusion Author Bio Publisher Introduction African wild dogs probably have the most obvious name among animals For one they are from Africa they are wild and they are definitely dogs However just because their name is obvious doesn't mean everything about them is The African wild dog often neglected when it comes to talking about canids such as wolves coyotes and other dogs is actually a very interesting animal different from other dogs in some ways and very much like them in others

The African Wild Dog Joshua Ross Ginsberg, David Whyte Macdonald, IUCN/SSC Canid Specialist Group, 1997 Over the last 30 years the African wild dog population has declined dramatically Dogs have disappeared from 25 of the 39 countries where they were previously found and only 6 populations are believed to number more than 100 Today it is believed that only between 3 000 5 500 dogs remain in 600 1 000 packs with most to be found in eastern and southern Africa The dramatic reduction in their population is attributed to a number of factors including human population growth and activities deterioration of habitat and contact with domestic dogs and their diseases This Action Plan explores some of the reasons behind their disappearance and provides a number of proposed solutions split into 3 priority areas ranging from habitat management and conservation to monitoring domestic dogs

In Search of the African Wild Dog Roger De la Harpe, Pat De la Harpe, 2009 Arguably the most successful hunter in Africa the African wild dog ironically finds itself on the brink of extinction Part of the Canidae family and sharing a general similarity with the various canids worldwide the African wild dog differs fundamentally from other canids it belongs to the genus *Lycaon* which formed a new branch on the family tree some 3 million years back and subsequently evolved independently Today it is the only survivor of this unique line and because of its genetic difference is unable to interbreed with any of its canid relatives or even with the domestic dog Previously found in diverse habitats across the continent it has tragically disappeared from much of its former range Today there are only an estimated 3 000 to 5 500 wild dogs left in the whole of Africa a mere 500 of which occur in South Africa In spite of or perhaps because of the elusive nature of the wild dogs and their limited population numbers Roger and Pat have produced their best
