

COLDER TIMES

Approximately 20,000 years ago, this is what our planet looked like. The sea level was 125 meters lower, the climate was colder and drier but most importantly, huge ice sheets covered continents since the average temperature was 6°C lower than it is today. From ocean currents, to the fauna and flora, including coastlines and seas, everything was radically different.

The ice sheet in North America is a huge continental ice sheet that stretched across the continent and a lot of the way that it melted away.

The ice sheet in Europe was a lot smaller than the one in North America, but it still covered a large area of the continent.

The ice sheet in Antarctica was a huge continental ice sheet that stretched across the continent and a lot of the way that it melted away.

Labels on the map indicate the extent of the ice sheets and the sea level. The white areas represent land covered by ice, the light blue areas represent ice extending to the coast, and the dark blue areas represent open water.
