Crystallization Of Biological Macromolecules:

Crystallization of Biological Macromolecules Alexander McPherson,1999 This extensively illustrated book by Alexander McPherson a master practitioner accomplishes several important goals it presents the underlying physical and chemical principles of crystallization in an approachable way it provides the reader with a biochemical context in which to understand and pursue successful crystal growth it instructs the reader in practical aspects of the technologies required and it lays out effective strategies for success that investigators can readily apply to their own experimental questions This readable volume has been created for every investigator in biomedicine whose studies may require a shift in focus from gene to protein product as well as chemists and physicists interested in the functions of biologically active macromolecules

Crystallization of Biological Macromolecules ,2001 *Macromolecular Crystallization and Crystal Perfection* Naomi E Chayen,John R Helliwell,Edward H Snell,2010-03-25 The crystallization of proteins and nucleic acids and or their complexes has become more highly automated but is still often a trial and error based approach In parallel a number of X ray diffraction based techniques have been developed which explain the physical reasons limiting the resulting crystallographic data and thus show how that data may be improved Crystal growth is also pivotal in neutron crystallography which establishes the hydrogen and hydration aspects Thus this book is aimed at addressing the science behind obtaining the best and most complete structural data possible for biological macromolecules so that the detailed structural biology and chemistry of these important molecules emerge Crystal imperfections such as twinning and lattice disorders as well as multiple crystal situations and their possible remedies are also described The small crystal frontier in micro crystal crystallography crystallites in powders and finally down to the proposed single molecule structure determination of X ray lasers are covered Overall this interdisciplinary book will interest crystal growers X ray and neutron physicists and the biological crystallographers including graduate students **Crystal Growth of Biological Macromolecules** K. Proteins Arnaud Ducruix, Richard Giegé, 1999-10-21 Crystallography is the major method of determining structures of biological macromolecules yet crystallization techniques are still regarded as difficult to perform This new edition of *Crystallization of Nucleic Acids and Proteins A Practical Approach* continues in the vein of the first edition by providing a detailed and rational guide to producing crystals of proteins and nucleic acids of sufficient quantity and quality for diffraction studies It has been thoroughly updated to include all the major new techniques such as the uses of molecular biology in structural biology maximizing expression systems sequence modifications to enable crystallization and the introduction of anomalous scatterers diagnostic analysis of prenucleation and nucleation by spectroscopic methods and the two dimensional electron crystallography of soluble proteins on planar lipid films As well as an introduction to crystallogenesis the other topics covered are Handling macromolecular solutions experimental design seeding proceeding from solutions to crystals Crystallization in gels Crystallization of nucleic acid complexes and membrane proteins Soaking techniques Preliminary characterization of crystals in order to tell whether they are suitable for diffraction studies As with all *Practical Approach* books the protocols have been written by experienced researchers and are tried and tested methods The underlying theory is brought together with the laboratory protocols to provide researchers with the conceptual and methodological tools necessary to exploit these powerful techniques *Crystallization of Nucleic Acids and Proteins A Practical Approach 2e* will be an invaluable manual of practical crystallization methods to researchers in molecular biology crystallography protein engineering and biological chemistry

Crystallization of Membrane Proteins Hartmut Michel, 2018-01-18 The precise knowledge of the structure of biological macromolecules forms the basis of understanding their function and their mechanism of action It also lays the foundation for rational protein and drug design The only method to obtain this knowledge is still crystallography At present the structures of about 400 proteins are known at or nearly at atomic resolution However only two of them are membrane proteins or complexes of the membrane proteins The reasons for the difference is not the crystals of membrane proteins resist forming special problems when being analysed The reason is that the membrane proteins resist into forming into well ordered crystals The intention of this book is to help to produce well ordered crystals proteins and to provide guidelines it is aimed at both biochemists and protein crystallographers
