In addition we are facing the arrival of super aging society. Obesity's effects on cognitive decline mobility hypertension and stress are similar to symptoms seen in aging. Both obesity and aging lead to serious health problems and increase the risk of developing multiple diseases and even death. Aging is associated with an increase in abdominal fat a major contributor to insulin resistance and metabolic syndrome. Obesity and aging share a similar spectrum of phenotypes such as compromised genomic integrity impaired mitochondrial function accumulation of intracellular macromolecules weakened immunity shifts in tissue and body composition and enhanced systemic inflammation. Overall the current search results suggest that there is a complex relationship between obesity aging and stress. Both obesity and aging are associated with inflammation and oxidative stress which are also associated with stress. In order to understand the cross talk among obesity aging and stress from an endocrinological point of view we propose the topic entitled Endocrinology of obesity aging and stress.
