Biologists believe that environmental influences modify genetic inheritance. They also believe that many behaviors are determined by a combination of inheritance and environmental influences. In fact, a 2014 study published in the journal *Science* found that the environment can influence the expression of genes, which in turn can affect the development of the brain and behavior.

Biologists believe that both nature and nurture play a role in who we are. They believe that the environment can influence the way we think and feel, and that the environment can influence the way we behave. They believe that the environment can influence the way we learn and that the environment can influence the way we grow. They believe that the environment can influence the way we live and that the environment can influence the way we die.

It is true that the environment can influence the way we think and feel, and that the environment can influence the way we behave. But it is also true that the environment can influence the way we learn and that the environment can influence the way we grow.
