Beginners Guide To Microarrays:

A Beginner's Guide to Microarrays Eric M. Blalock, 2011-06-27 A Beginner's Guide to Microarrays addresses two audiences the core facility manager who produces hybridizes and scans arrays and the basic research scientist who will be performing the analysis and interpreting the results User friendly coverage and detailed protocols are provided for the technical steps and procedures involved in many facets of microarray technology including Cleaning and coating glass slides Designing oligonucleotide probes Constructing arrays for the detection and quantification of different bacterial species Preparing spotting solutions Troubleshooting spotting problems Setting up and running a core facility Normalizing background signal and controlling for systematic variance Designing experiments for maximum effect Analyzing data with statistical procedures Clustering data with machine learning protocols

Beginner's Guide to Microarrays Blalock, Eric M., ed, 2003

Microarray Gene Expression Data Analysis Helen Causton, John Quackenbush, Alvis Brazma, 2009-04-01 This guide covers aspects of designing microarray experiments and analysing the data generated including information on some of the tools that are available from non commercial sources Concepts and principles underpinning gene expression analysis are emphasised and wherever possible the mathematics has been simplified The guide is intended for use by graduates and researchers in bioinformatics and the life sciences and is also suitable for statisticians who are interested in the approaches currently used to study gene expression Microarrays are an automated way of carrying out thousands of experiments at once and allows scientists to obtain huge amounts of information very quickly Short concise text on this difficult topic area Clear illustrations throughout Written by well known teachers in the subject Provides insight into how to analyse the data produced from microarrays

Rampil, 2007-07-27 Microarray Technology Volumes 1 and 2 present information in designing and fabricating arrays and binding studies with biological analytes while providing the reader with a broad description of microarray technology tools and their potential applications The first volume deals with methods and protocols for the preparation of microarrays The second volume details applications and data analysis which is important in analyzing the enormous data coming out of microarray experiments Among the topics discussed in Volume 1 Synthesis Methods are matrices in the synthesis of microarrays array optimization processes array based comparative genomic hybridization 60 mer oligonucleotide probes bifunctional reagents NTMTA and NTPAC and high density arrays using digital microarray synthesis platforms Other topics include multiplex ligation dependent probe amplification MLPA hybridization conditions in situ synthesized oligo arrays peptide arrays high density replication tools HDRT protocols for the quantification of oligo hybridization glyco bead arrays and an investigation into the emerging nano technology Microarray Technology Volumes 1 and 2 provide ample information to all levels of scientists from novice to those intimately familiar with array technology

Biodegradation Research Lyman E. Pawley,2007 This volume presents new leading edge research on environmental biodegradation which is the destruction of organic compounds by micro organisms Micro organisms particularly bacteria are responsible for the decomposition of both natural and synthetic organic compounds in nature Mineralisation results in complete conversion of a compound to its inorganic mineral constituents for example carbon dioxide from carbon sulphate or sulphide from organic sulfur nitrate or ammonium from organic nitrogen phosphate from organophosphates or chloride from organochlorine Since carbon comprises the greatest mass of organic compounds mineralisation can be considered in terms of CO₂ evolution Radioactive carbon 14 ¹⁴C isotopes enable scientists to distinguish between mineralisation arising from contaminants and soil organic matter However mineralisation of any compound is never 100% because some of it 1040% of the total amount degraded is incorporated into the cell mass or products that become part of the amorphous soil organic matter commonly referred to as humus Thus biodegradation comprises mineralisation and conversion to innocuous products namely biomass and humus Primary biodegradation is more limited in scope and refers to the disappearance of the compound as a result of its biotransformation to another product Compounds that are readily biodegradable are generally utilised as growth substrates by single micro organisms Many of the components of petroleum products and frequent ground
