Beginning Algebra Charles P. McKeague, Alan Wise, 1994 Beginning Algebra: Connecting Concepts Through Applications Mark Clark, Cynthia Anfinson, 2012-12-19 BEGINNING ALGEBRA CONNECTING CONCEPTS THROUGH APPLICATIONS shows students how to apply traditional mathematical skills in real world contexts The emphasis on skill building and applications engages students as they master algebraic concepts problem solving and communication skills Students learn how to solve problems generated from realistic applications instead of learning techniques without conceptual understanding The authors have developed several key ideas to make concepts real and vivid for students First they emphasize strong algebra skills These skills support the applications and enhance student comprehension Second the authors integrate applications drawing on realistic data to show students why they need to know and how to apply math The applications help students develop the skills needed to explain the meaning of answers in the context of the application Third the authors develop key concepts as students progress through the course For example the distributive property is introduced in real numbers covered when students are learning how to multiply a polynomial by a constant and finally when students learn how to multiply a polynomial by a monomial These concepts are reinforced through

applications in the text Last the authors approach prepares students for intermediate algebra by including an introduction to material such as functions and interval notation as well as the last chapter that covers linear and quadratic modeling
